In the spring of 2010, Harvard Business School's graduating class asked HBS professor Clay Christensen to address them—but not on how to apply his principles and thinking to their post-HBS careers. The students wanted to know how to apply his wisdom to their personal lives. He shared with them a set of guidelines that have helped him find meaning in his own life, which led to this now-classic article. Although Christensen's thinking is rooted in his deep religious faith, these are strategies anyone can use. Since 1922, Harvard Business Review has been a leading source of breakthrough ideas in management practice. The Harvard

Business Review Classics series now offers you the opportunity to make these seminal pieces a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world.

Core Entrustable Professional Activities for Entering Residency
McGraw Hill Professional

Patients who are confident of physicians' intellectual and technical abilities are sometimes not convinced of their professional behavior. Systemic and anecdotal cases of physician

misconduct, conflict of interest, and self-interest abound. Many have even come to mistrust physicians as patient advocates. How can patients trust the intellectual and technical aspects of medical care, but not the professional? In order to enhance and promote professionalism in medicine, one should expect it, encourage it, and evaluate it. By measuring their own professional behavior, physicians can provide the kind of transparency with which they can regain the trust of patients and society. Not only patients, but also institutions which accredit organizations have demanded accountability of physicians in their professional behavior. While there has been much lament and a few strong proposals for improving professionalism, no single reliable and valid measure of the success of these proposals exists. This book is a theory-to-practice text focused on ways to evaluate professional behavior written by leaders in the field of medical education and assessment.

Surgery: A Case Based Clinical Review has proven to be the premiere resource to help prepare medical students for the surgical shelf exam and clinical wards. The second edition was conceived after listening to the feedback we received from students. We have added several new chapters and updated the others. This book continues to provide the reader with a comprehensive understanding of surgical diseases in one easy-to-use reference that combines multiple teaching formats. The book begins using a case based approach. The cases presented cover the diseases most commonly encountered on a surgical rotation. The cases are followed by a series of short questions and answers, designed to provide further understanding of the important aspects of the history, physical examination, differential diagnosis, diagnostic work-up and management, and questions that may arise on surgical rounds and on the shelf exam. The book is written in an easy-to-understand manner to help reinforce important surgical exam concepts. The second edition of *Surgery: A Case Based Clinical Review* will be of great utility for medical students when they rotate on surgery, as well as interns, physician assistant students, nursing students, and nurse practitioner students.

Surgery Lippincott Williams & Wilkins

In this collection of essays, the authors don't argue with those attributes deemed to be the essence of professionalism in

medicine. Instead, they ask questions of the discourse from which they arise, how the specialized language of academic medicine disciplines has defined, organized, contained, and made seemingly immutable a group of attitudes, values, and behaviors subsumed under the label "professional" or "professionalism." This collection aims to be a critical text, one that questions the profession's beliefs about the nature of its work and how such beliefs are enacted (or not) in medical education, particularly as they fuel the professionalism discourse.
