 This is one of the finest statewide sourcebooks ever published, a remarkable compilation of sources and resources that are available to help researchers find their

Michigan ancestors. It identifies records on the state and regional level and then the county level, providing details of vital records, court and land records, military records, newspapers, and census records, as well as the holdings of the various societies and institutions whose resources and facilities support the special needs of the genealogist. County-by-county, it lists

the names, addresses, websites, e-mail addresses, and hours of business of libraries, archives, genealogical and historical societies, courthouses, and other record repositories; describes their manuscripts and record collections; highlights their special holdings; and provides details regarding queries, searches, and restrictions on the use of their records.

 In the summer of 1862, a group of volunteer soldiers joined the Twenty-First Michigan Volunteer Infantry in western Michigan. For the next two and a half years, these men saw extensive combat against the Confederacy in America's most brutal and bloody war. Drawn from hundreds of letters, diaries, and memoirs, Into the Tornado of War is the complete history of this

Union  
 regiment as seen through the soldiers' eyes. James Genco traces their movements from their first major battle at Perryville, Kentucky, through Tennessee, Georgia, and finally, the Carolinas. In addition to Perryville, the regiment was severely tested in the landmark battles of Stones River, Chickamauga, and Bentonville, and participated in Union General William T.

Sherman's  
 March to the Sea in November and December of 1864. As the war wound down in 1865, the regiment was part of the Union Army that cut its way through the Carolinas, ultimately finding itself in the forefront of one of the last major battles of the war. In a valuable contribution to the scholarship on the American Civil War, Into the Tornado of War paints a picture of the realities of the

war through the words of real soldiers. *Surviving Tornadoes* University of Oklahoma Press  
 The first French explorers and missionaries came to the area that would later be known as Chesterfield Township around 1611, naming the dominant waterway Luc Sainte Claire. The first purchase of government land was made by Fabian Robertjean on August 20, 1820, in

Section 11, near New Baltimore's Washington Street. In 1842, via Public Act 57, the Michigan State Legislature officially created the charter township of Chesterfield. Chesterfield is nestled between two old Michigan cities, New Baltimore and Mt. Clemens. The history of the township is closely aligned with these two cities, especially New Baltimore, with whom it

has shared a post office from the time the New Baltimore Post Office was established in 1851 as Ashleyville (named for founder Alfred Ashley) and given its current name in 1855. New Baltimore was a part of Chesterfield until 1931, when it "seceded" from the township.

 From the San Diego wildfires to multi-drug-resistant strains of

bacteria, communities are facing an ever-growing list of potential disasters. Some events, like pandemic flu or anthrax attacks, are public health emergencies first and foremost. Hurricane Katrina taught us, however, that lack of planning for the frail, elderly, and impoverished population can turn a natural disaster into a healthcare nightmare and lead to needless death and suffering.

Emergency managers and public health professionals must integrate their prevention and response efforts to serve their communities most effectively. The structure of each chapter offers an innovative approach to organizing key information: 1. Case Study or Historical Example 2. Disaster-specific Terms Defined 3. Disaster Description 4. Health Threat (Morbidity and Mortality) 5. Prevention 6.

Immediate Actions 7. Recovery or Managing the Aftermath 8. Summary Disasters and Public Health is a crucial tool in planning for and responding to the health impact of any crisis situation. Bruce Clements served over 20 years in the U.S. Air Force and Air National Guard as a Public Health Officer and a Nuclear, Biological, and Chemical Warfare Defense

<p>Instructor, a Hazardous Materials Specialist with an Urban Search and Rescue Team, and as a Safety Officer with a Disaster Medical Assistance Team. He also served as the Public Health Preparedness Director of Missouri in 2006, when the state experienced a record number of disaster declarations. He has researched and compiled this information on the health impact of a wide range of disasters into one quick reference. Emergency managers can also no longer afford to be surprised by the next crisis that erupts. You're a meteorology student fascinated by storms. But Mother Nature can be unpredictable. Situations can quickly turn deadly when extreme weather is involved. What do you do when, You're in a van full of people and a tornado suddenly appears to be headed right for you? A hurricane gains strength along the Florida coast but you're unable to convince people to

leave their homes? A flash flood suddenly strikes, putting you and your friends and family in mortal danger? Experience the life or death dilemmas that face storm chasers. YOU CHOOSE what you'll do next. The choices you make will either lead you to safety or to doom. *Climatological Data for the United States by Sections W.* W. Norton & Company  
Imagine a twisting cone

of wind racing toward your house at speeds of up to 300 miles per hour. As it approaches, trees, cars, and even cows are lifted into a funnel cloud and bricks, glass, and wood are flung out in all directions. You're seeing a tornado the smallest and strongest storm on earth. A tornado can be a catastrophe for people and their property. But twisters are also one of the most fascinating forces of

nature. With dramatic images and firsthand survivor stories plus the latest facts and figures this book takes you up close with tornado disasters. Grand Rapids and the Civil War Into the Tornado of War On May 22, 2011, Patricia and her husband's home in Joplin, Missouri, was leveled by one of the most powerful tornadoes in recorded history. This experience caused them

both to look at life's challenges differently and to live in the miraculous. Storms of all kinds bring turmoil and loss into our lives, often leaving us bitter, alone, depressed, or defeated. In It's Never Just Another Sunday, Patricia shows how storms, both big and small, have affected her life and marriage. And she shows how anyone can go from victim to victor. Monthly Weather

WARNING! Tornado myths are under the microscope! Twister Tales looks at tornado myths and misconception s and sets the record straight. You'll find in-depth answers to questions like: Does a green sky mean a tornado is coming? Is outrunning a tornado in a car a bad idea? What does Doppler radar really tell you? Why are some waterspouts very dangerous, and others not

so much? Twister Tales also cracks open the record books to examine the 10 deadliest tornadoes in U.S. history. Find out that the question "Who gets the most tornadoes?" doesn't have an easy answer. "Be Weather Aware" sections help you put together a game plan before storms show up. This book is a must have if you like weather or science! Into the Tornado of

War LernerClassro om In the latter half of the 19th century, the city of Ypsilanti went through a rapid transition from a small farming community to a center of education and business. By 1900, Ypsilanti was nationally known for three things: the Michigan Central Gardens, the mineral wells, and underwear. The gardens were designed by famed landscape gardener John

Laidlaw, who studied gardening in his native Scotland before coming to the United States. Beginning in the 1880s, people came from miles away to bathe in Ypsilanti's mineral waters, which were said to cure just about anything. And for many years, Ypsilanti was the home of the Underwear Factory, where the finest full body union suits were made. Dr. Helen McAndrew

was the first woman doctor in Ypsilanti, opening her practice in 1854. She and her husband were active in the Underground Railroad, which Ypsilanti played a very active role in. Ypsilanti is also the home of Eastern Michigan University, founded in 1848, becoming the first normal school west of the Alleghenies. *Climatological Data for the United States by Sections* Rowman &

Littlefield Ohio can be a land of weather extremes. Bringing together data from government records, scientific studies, memoirs, diaries and newspapers, this study highlights 200 weather events from 1790 to the present which demonstrate extremes of rain, snow, storms and temperature. **Ypsilanti** Steve LaNore Surviving Tornadoes will look at children who

experienced tornadoes around the world, through history and up to the present day.

*Scanning the Skies* Palala Press Indiana suffered enormous losses in the Great Flood of 1913, yet this disaster is largely forgotten. The combined tornado and flood barreled through Terre Haute, killing more than twenty. In Peru, 114 miles away, the circus lost most of its animals in the storm. At the

southwestern corner of the state, a "sea of water," as local papers put it, washed over Evansville, turning streets into canals. In the capital, levee failures left hundreds homeless and vulnerable to disease and famine. Pulling from archival photographs, newspapers and local accounts, Dr. Nancy M. Germano shares stories from across the state to reveal how Indiana's history of settlement and

development contributed to one of the state's worst disasters. *Storms* Kent State University Press A novelist and historian team up to tell the story of the October 1871 fire in the lumber town of Peshtigo, Wisconsin, vividly re-creating the personal and political battles leading to this monumental natural disaster, and delivering it from the lost annals of American history. 16-

Improvements in communication, especially the increasing popularity of television, allowed the Bureau to expand its warning system further. This book highlights the modern tornado watch system and explains how advancements during the latter half of the twentieth-century--such as computerized

data collection and processing systems, Doppler radar, state-of-the-art television weather centers, and an extensive public education program--have resulted in the drastic reduction of tornado fatalities. *Hosanna! The Two Palm Sunday Tornado Outbreaks of the Lower Great Lakes* Abbott Press "Grand Rapids responded to President Abraham Lincoln's call for troops with

passionate swiftness. Kent County men fought stubbornly on memorable battlefields like First Bull Run, Stones River and Gettysburg, as well as obscure places like Boonville, La Vergne and Mossy Creek. An affinity for cavalry earned Grand Rapids the moniker "Michigan's Horse Soldier City," while Valley City engineers designed and constructed spectacular railroad bridges

throughout the South. Back home, the soldiers' mothers, wives and sisters faced the conflict's many challenges with patriotic doggedness. Dr. Roger L. Rosentreter chronicles how Grand Rapids citizens responded to wartime trials and tribulations while helping the North save the Union and end slavery."-- Back cover.
