Divine Prescription, The Simon and Schuster Alternate Medicine (APH) Hyperthermia in Oncology TEACH Services, Inc. Used as a reference by students of acupuncture, Healing with Whole Foods is an invaluable guide to the theory and practice of Chinese medicine. With facts about green foods such as spirulina and blue-green algae and information about the "regeneration diets" used by cancer patients and arthritics, it is also an accessible primer on nutrition—and a inspiring cookbook with more than 300 mostly vegetarian,

nutrient-packed recipes. The information on Chinese medicine is useful for helping to diagnose health imbalances, especially nascent illnesses. It's smartly paired with the whole-foods program: because the Chinese have attributed various health-balancing properties to foods, you can tailor your diet to help alleviate symptoms of illness. For example, Chinese medicine dictates that someone with low energy and a pale complexion (a yin deficiency) would benefit from avoiding bitter foods and increasing "sweet" foods such as soy, black sesame seeds, parsnips, rice, and oats. (Note that the Chinese definition of sweet foods is much different from the American one!) Pitchford says in his dedication that he hopes the reader finds "healing, awareness, and peace" by following his program. The diet is certainly ascetic by American standards (no alcohol, caffeine, white flour, fried foods, or sugar, and a minimum of eggs and dairy) but the reasons he gives for avoiding these "negative energy" foods are compelling. From the adrenal damage imparted

by coffee to the immune dysfunction brought on by excess refined sugar, Pitchford spurs you to rethink every dietary choice and its ultimate influence on your health. Without being alarmist, he offers dietary tips for protecting yourself against the dangers of modern life, including neutralizing damage from water fluoridation. There's further reading on food combining, female health, heart disease, pregnancy, fasting, and weight loss. Overall, this is a wonderful book for anyone who's serious about strengthening his or her body from the inside out.

A guide to the latest research in oxygen therapies and their use on the path to optimum health • Presents new clinical advancements and scientific findings from

Cuba, Italy, Spain, Russia, China, and the United States • Explores the effectiveness of oxidative therapies for treating many conditions, including heart disease, cancer, HIV, hepatitis, diabetes, MS, macular degeneration, herniated discs, arthritis, Alzheimer's, Crohn's, candida, emphysema, and eczema • Includes new research on oxidative therapies in veterinary medicine and dentistry, including its success in treating cavities and preventing infection

Scientists now agree that most disease states are caused by oxygen starvation at a cellular level. Polluted air, devitalized foods, and poor breathing habits can all lead to chronic oxygen deficiency, a bodily environment in which toxins thrive as the overall immune response is weakened. Through oxidative therapies--the medical use of ozone (O3) or hydrogen peroxide (H2O2)--we can assist the body in generating the oxygen needed to oxidate viruses and bacteria as well as weak and sick tissue cells, so stronger and healthier cells can take their place.

Presenting the latest advancements and clinical

findings from Cuba, Italy, Spain, China, Russia, and the United States, as well as recommendations from the International Scientific Committee of Ozone Therapy (ISCO3), Nathaniel Altman explores the effectiveness of oxidative therapies for treating a wide range of conditions, including heart disease, herpes, HIV, diabetes, candida, tonsillitis, macular degeneration, herniated discs, burns, and arthritis. He shows how Cuban and Russian physicians have been successfully treating patients with heart disease with ozone therapy for decades and explains how ozone interacts with cells when introduced into the bloodstream, stimulating the body's own ability to fight cancer, osteoporosis, and hepatitis. He investigates promising new studies on the use of ozone and hydrogen peroxide therapies to treat Alzheimer's, Crohn's, multiple sclerosis, emphysema, eczema, and sepsis and the potential for these therapies to successfully treat new diseases such as Ebola and Zika. The author also explores the expanding use of oxidative therapies in veterinary medicine and

dentistry, including their success in treating cavities and preventing infection. Providing a detailed resource section, he explains how to combine oxidative therapies with holistic methods, such as fasting, detox therapies, herbal medicine, and nutritional healing, for a stronger start on the path to optimum health.

This encyclopedia explores historical and contemporary fringe remedies seen as strange, ridiculous, or even gruesome by modern Western medicine but which nevertheless played an important role in the history of medicine. From placing leeches on the neck to treat a cough to using crocodile dung to prevent pregnancy, a number of medical treatments that now seem unusual were once commonplace. While a few of these remedies may have been effective, most were either useless or actually counterproductive to good health. Even today, there are alternative and fringe treatments considered bizarre by mainstream medicine yet used by

hundreds of thousands of people. *Bizarre Medicine: Unusual Treatments and Practices through the Ages* offers a fascinating look into the history of medicine. Entries are organized by disease or medical condition and explore the folk and traditional "cures" used to treat them. Explanations are provided for why some treatments may have worked and why others may have done more harm than good. In addition, entries provide a clear description of the causes, symptoms, and current treatment options for each condition based on current scientific understanding. Each entry also discusses the condition's enduring impact on society and the arts.

New and suppressed breakthroughs in energy medicine, ways to combat toxins and electromagnetic fields, and the importance of non-GMO foods • Explores the use of microcrystals, ozone and hydrogen peroxide therapy, and

how to tap in to healing antioxidant electrons from the Earth • Reveals the scientifically proven health risks of genetically modified foods •

Examines the suppressed cancer-curing electromedicine of Royal Raymond Rife and Nobel laureate Albert Szent-Györgi Natural, nontoxic, inexpensive, and effective alternatives to conventional medicine exist, yet they have been suppressed by the profit-driven medical-pharmaceutical complex. Presenting a compendium of some of the most revolutionary yet still widely unknown discoveries in health and energy medicine, this book edited by Finley Eversole, Ph.D., explores the use of microcrystals to harmonize the energies of body, mind, and environment; the healing effects of ozone and hydrogen peroxide therapy; ways to combat electromagnetic fields and environmental toxins; sources of disruptive energy that cause stress and health problems, including other people's negative emotions; and how to tap in to healing antioxidant electrons from the Earth. The book reveals the scientifically proven health risks of

genetically modified foods--the first irreversible technology in human history with still unknown consequences. It looks at the link between industrial farming and the precipitous rise in heart disease, cancer, diabetes, and Alzheimer's over the past 100 years, providing a 10-point Low-Toxin Program to reduce your risk. It explores the cancer-curing electromedicine of Royal Raymond Rife and its suppression by the medical establishment as well as Nobel laureate Albert Szent-Györgi's follow-up discovery of Frequency Therapy. Offering a window into the holistic future of medicine, the book shows the body not simply as a biological machine to be patched and repaired but as a living organism made up of cells dynamically linked to their inner and outer environments.
