 In building wiring, a light switch is a switch, most commonly used to operate electric lights, permanently connected equipment, or electrical outlets.

Portable lamps such as table lamps will have a light switch mounted on the socket, base, or in-line with the cord. Manually operated on/off switches may be substituted by remote control switches, or light dimmers that allow controlling the brightness of lamps as well as turning them on or off. Light switches are also found in flashlights and automobiles and other vehicles. This updated and expanded second edition of Book provides a user-friendly introduction to the subject, Taking a clear structural framework, it guides the reader through the subject's core elements. A flowing writing style combines with the use of illustrations and diagrams throughout the text to ensure the reader understands even the most complex of concepts. This succinct and enlightening overview is a required reading for all those interested in the subject . We hope you find this book useful in shaping your future career & Business.

Safe, efficient, code-compliant electrical installations are made simple with the latest publication of this widely popular resource. Like its highly successful previous editions, the National Electrical Code? 2011 LOOSE LEAF combines solid, thorough, research-based content with the tools you need to build an in-depth understanding of the most important topics. It provides the full text of the updated Code regulations alongside expert commentary from code specialists, offering code rationale, clarifications for new and updated rules, and practical, real-world advice on how to apply the code. And in a loose-leaf format, it's easy to customize your experience with the Code by adding job- and situation- specific materials. New to the 2011 edition are articles including first-time Article 399 on Overhead Conductors with over 600 volts, first-time Article 694 on Small Wind Electric Systems, first-time Article 840 on Premises Powered Broadband Communications Systems, and more. This winning combination has created a valuable reference for those in or entering careers in electrical design, installation, inspection, and safety.

[Black & Decker Complete Guide to Wiring, 6th Edition](#) Createspace Independent Publishing Platform

It is quite expensive to install additional conventional light switches in existing buildings. Public Works Canada estimates the total cost of installing one switch in a federal building at between \$1 25 and \$1 50 (1). Labour costs for installing or re-routing wiring and conduit in walls and ceilings are high. Consequently, new lighting control systems are being developed with the primary objective of reducing the high installation costs. Examples include carrier current control systems that use existing wiring as a ready-made communication medium, electronic wall-timer switches, and ceiling pull-cord switches. A fibre-optic light switch has been developed that can compete favourably on an economic and performance basis with conventional and other new control systems. Its prime advantage is low installation cost. The fibre-optic "control wiring" can be surface mounted instead of recessed like conventional wiring behind or in the wall fabric. If the switches can also be manufactured at low cost, further advantages are apparent simply because one can afford to install a greater number of switches than would be economic with conventional controls. More switches in buildings, if properly located and managed, will make it possible to reduce the use of electrical energy for lighting, which can account for up to 50 per cent of the total energy consumption in offices, schools and other large buildings. The light switch can thus be an important tool in over-all conservation programs in buildings.
