CPT 2021 Professional Edition Health Care Transition
 Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals

to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

This text provides a foundational understanding of therapeutic relationships and the transitional discharge model (TDM), a person-centered, evidence-based model that supports a smooth transition from hospital to community for people with mental

illness Starting with background into the ground-breaking work of Dr. Hildegard Peplau, the mother of modern psychiatric nursing, and moving towards a transdisciplinary transitional discharge perspective, chapters introduce students and practitioners to theoretical, historical, and current perspectives on therapeutic relationships as they relate to transitional care. These perspectives foreground empirical research and practical applications that can be implemented in hospital and community settings. The Appendix features an essential "TDM toolkit" with forms, learning topics, and checklists developed by programs that implement TDM. Essential reading for those studying psychiatric nursing, this book combines theory, research, and best practices into a "roadmap" for students across nursing and psychiatric disciplines to coordinate these systems without having to implement radical changes to practice.

This new edition of one of the premier references for geriatric nurses in hospital, long-term, and community settings delivers current guidelines, real-life case studies, and evidence-based protocols developed by master educators and practitioners. With a focus on improving quality of care, cost-effectiveness, and outcome, the fifth edition is updated to provide the most current information about care of common clinical conditions and issues in older patients. Several new expert contributors present current guidelines about hip fractures, frailty, perioperative and postoperative care, palliative care, and senior-friendly emergency departments. Additionally, chapters have been reorganized to enhance logical flow of content and easy information retrieval. Protocols, systematically tested by more than 300 participating NICHE (Nurses Improving Care for Health system Elders) hospitals, are organized in a consistent format and include an overview, evidence-based assessment and intervention strategies, and an illustrative case study with discussion. Additionally, protocols are embedded within chapter text, providing the context and detailed evidence for each. Chapter objectives, annotated references, and evidence ratings for each protocol are provided along with resources for additional study. New to the Fifth Edition: Reorganized to enhance logical flow of information and ease of use Updated and revised Includes new contributions from expert educators and practitioners Provides new chapters on perioperative and postoperative care, general surgical care, care of hip fracture, palliative care, and the senior-friendly emergency department Key Features: Includes PowerPoints and a test bank for instructors Delivers evidence-based, current guidelines and protocols for care of common clinical conditions in the older person Illustrates the application of clinical protocols to real-life practice through case studies and discussion Edited by nationally known geriatric leaders who are endorsed by the Hartford Institute for Geriatric Nursing and NICHE Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

This completely updated third edition challenges nurses to fulfill their critical role and responsibility to society in advancing health policy by providing them with the tools to achieve their goals. This edition addresses the impact of critical issues including COVID-19, diversity, social determinants of health, and social justice. Challenges faced by nurses in care delivery including the safety, health, and well-being of nurses (e.g., suicide) are explored. Recently issued seminal documents, including the Future of Nursing 2020-2030 report, the American Association of Colleges of Nurses' "Essentials," and the World Health Organization's report on the Health Workforce are highlighted. Emphasis is placed opportunities for nurses to leading and taking action in health policy. Robust discussion of strategies with the

use of evidence and real-world examples and stories provide nurses with the foundation to be policy influencers. This pragmatic text helps nurses acquire an in-depth understanding of the intricacies of policy development and the opportunities to shape policy across the larger healthcare landscape and within their communities. It illuminates the steps, strategies, and competencies needed for health policy advocacy in various settings and also incorporates a Health in All Policies approach. Real world examples of policymaking by frontline nurses are provided. Leadership, ethical, and social justice principles are integrated across chapters, which exemplify policy development from the global scale to the local level. A completely revised chapter describing the trajectories of nurse influencers at different career stages illustrates how nurses can be engaged in policy to address new and perennial challenges faced by nurses. A new chapter, "Transforming Policy Through Innovation," encompasses the most current technologies and opportunities for creative development within healthcare. To promote learning about policy, abundant examples, learning activities, and exercises are provided. New Policy Challenges/Solutions, Policies on the Scene, and case examples reflect recent changes to the healthcare environment. A comprehensive Instructor's Manual also includes strategies for purposeful discourse that facilitate a deeper dive into provocative topics. PowerPoint slides include a faculty version with notes pages to facilitate discussion and a student version. New to the Third Edition: Major revisions and updates to each chapter New chapter: Transforming Policy through Innovation New lead authors that expand the high standard of content for advanced competencies New Policy Challenge/Solution and Policy on the Scene features in step with today's healthcare system The impact of COVID-19 on health policy Policy implications of key reports impacting health outcomes and nursing New illustrations, figures, and exhibits to emphasize key events and concepts Key Features: Features real-world exemplars from distinguished national and international nursing policy leaders Illustrates how nurses are leaders across settings in a variety of policy arenas Discusses policies to address social and economic inequities impacting health Includes Learning Activities and E-resources designed for meaningful engagement Patton-Zalon-Ludwick Policy Framework provides a visual guide for the self-assessment of policy competencies A comprehensive Instructor's Manual and PowerPoint slides are included!

Policy & Politics in Nursing and Health Care - E-Book Springer Publishing Company

This book offers essential information on interventions and actions that enable and promote transition experiences for

adolescents and young adults. It provides guidance on appropriate strategies that bring together these groups and caregivers in the context of transition preparation, and those which optimize adolescents' and young adults' ability to self-manage their healthcare. The health care transition for adolescents and young adults has gained more attention given the improved survival rates, including for those with long-term conditions. It is now estimated that more than 90% of children diagnosed with a long-term condition will survive into adulthood. The significant change in survival requires concomitant services to facilitate adolescents' and young adults' successful transition to adult health care, therefore providers need education, knowledge and skills to support healthcare transition services. A recent US national survey demonstrated only 10% of parents/caregivers reported that their children received transition preparation services. This book is targeted at nurses and pediatric and adult health care providers of different disciplines seeking guidance on which interventions are available, how they can be used, advantages and challenges, and how best to promote a seamless transition for all adolescents and young adults with long-term conditions. It provides several examples of transition programmes and initiatives worldwide. There is an increasing focus on how nurses can support transition but little guidance on what is effective and what has been tried. This book will fill a gap by addressing all of these issues outlined above and by providing worked examples from leading nurse researchers and academics worldwide.

Role Transition to Patient Care Management Springer Publishing Company

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report.

Community/Public Health Nursing - E-Book Elsevier Health Sciences

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to

advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- *Patient Safety and Quality: An Evidence-Based Handbook for Nurses*. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>

State-of-the-art developments in multiple new technologies for older adult care Grounded in a unique team-based geriatrics perspective, this book delivers a broad range of current, evidence-based knowledge about innovative technology that has the potential to advance the care and well being of older adults. It provides key information about the development, selection, and implementation of technology products, and describes research evidence, education-based initiatives, and systems thinking. The book also examines challenges and barriers to implementation, adoption and innovation. From telehealth and assistive technology in the home to simulation and augmented reality in educational settings, the text provides a hands-on, field-tested articulation of how products can aid in the transitional care process, chronic care delivery, and geriatrics/gerontology education. It discusses technology developments in rural areas, home telehealth, wearable technology, personalized medicine, social robots, technology to assist seniors with cognitive impairments, the potential of artificial intelligence to enhance health care of older adults. The text is written to help health care professionals select the appropriate technology for their needs. Key Features: Describes the most current technology resources, evidence, and developments for older adult care Based on a team-centered approach Written by interprofessional health care providers experienced in implementing, developing and adopting technology to assist older adults Includes case studies depicting technology-related successes and failures Addresses the challenges, barriers, and opportunities for transforming aging with technology across transitions of care

The Future of Nursing Lippincott Williams & Wilkins

In today's environment where healthcare costs are outpacing the economy, healthcare systems are shifting from fee-for-service to value-based payment to deliver high-quality care while reducing costs. This shift presents nurses with the opportunity to take the lead in transforming care delivery and achieve the Triple Aim goals: improving patient experience of care, improving health of populations, and reducing per capita healthcare costs. INSPIRED Healthcare follows author Billie Lynn Allard and her team of nurses as they successfully implement an accountable community of health in pursuit of the Triple Aim. The INSPIRE Model they follow provides an evidence-based blueprint for other healthcare systems hoping to solve the complicated problems surrounding care transitions and health promotion

Public Health Nursing E-Book Prentice Hall

Palliative care has become increasingly important across the spectrum of healthcare, and with it, the need for education and training of a broad range of medical practitioners not previously associated with this field of care. Part of the Integrating Palliative Care series, this volume on surgical palliative care guides readers through the core palliative skills and knowledge needed to deliver high value care for patients with life-limiting, critical, and terminal illness under surgical care. Chapters explore the historical, philosophical, and spiritual principles of surgical palliative care, and follow the progression of the seriously ill surgical patient's journey from the pre-operative encounter, to the invasive procedure, to the post-operative setting, and on to survivorship. An overview of the future of surgical palliative care education and research rounds out the text. *Surgical Palliative Care* is an ideal resource for surgeons, surgical nurses, intensivists, and other practitioners who wish to learn more about integrating palliative care into the surgical field.

Nurses Making Policy Elsevier Health Sciences

Designed for both new registered nurses and nurses transitioning to a new clinical area, this extensive clinical reference is the only resource to provide essential information on more than 300 topics from 11 specialty areas. The Considerations section of each topic focuses on the role of the nurse throughout the treatment process, and discusses the role of other health care providers with a focus on multidisciplinary treatment. Intended primarily for university and hospital libraries, *A Guide to Mastery in Clinical Nursing* will also be of value to nursing faculty, undergraduate and graduate-level nurses and nursing students at all levels. Key Features: Provides essential information on over 300 clinical topics from 11 specialty areas Offers key knowledge for nurses new to practice or working in an unfamiliar nursing area Presented in a consistent format for ease of use Includes an overview of each specialty area Focuses on the role of the nurse throughout the treatment process Written and edited by expert clinicians and educators in each clinical area

Evidence-Based Geriatric Nursing Protocols for Best Practice, Fifth Edition Sigma Theta Tau

The United States has the highest per capita spending on health

care of any industrialized nation but continually lags behind other nations in health care outcomes including life expectancy and infant mortality. National health expenditures are projected to exceed \$2.5 trillion in 2009. Given healthcare's direct impact on the economy, there is a critical need to control health care spending. According to *The Health Imperative: Lowering Costs and Improving Outcomes*, the costs of health care have strained the federal budget, and negatively affected state governments, the private sector and individuals. Healthcare expenditures have restricted the ability of state and local governments to fund other priorities and have contributed to slowing growth in wages and jobs in the private sector. Moreover, the number of uninsured has risen from 45.7 million in 2007 to 46.3 million in 2008. *The Health Imperative: Lowering Costs and Improving Outcomes* identifies a number of factors driving expenditure growth including scientific uncertainty, perverse economic and practice incentives, system fragmentation, lack of patient involvement, and under-investment in population health. Experts discussed key levers for catalyzing transformation of the delivery system. A few included streamlined health insurance regulation, administrative simplification and clarification and quality and consistency in treatment. The book is an excellent guide for policymakers at all levels of government, as well as private sector healthcare workers.

Designated a Doody's Core Title! "[This] volume contributes useful knowledge not only to the field of aging studies, but to multiple disciplines and public policy. Anyone interested in aging studies or health care would find this volume useful and enlightening."--*Anthropology and Aging Quarterly* This unique volume, with its person- and context-centered focus, is the only book to emphasize the need to incorporate social, cultural, and demographics into transitional care protocol for elderly patients. It encompasses the larger context of life experience in order to provide optimal pathways through transitions of care for elderly patients and has broad implications for shaping policy and future research. A consideration of contextual factors for both patients and caregivers is woven throughout the book. Chapters focus on physical and complex health problems shaping transitions of care, legal, ethical, and decision-making issues including informed consent and end of life, the impact of the current fragmented healthcare system on transitions of care, educating the workforce in transitions of care, and planning for future pathways of transition that will accommodate the rapidly growing elderly population. The volume will be of interest to researchers, practitioners, educators, policy makers, students, elderly patients, and their caregivers. Key Features: Describes a person- and context-centered focus emphasizing social demographics and geographic location in understanding transitions of care among older adults. Based on the most current research on critical issues in transitional care for the elderly Written by a multidisciplinary cast of highly respected authors Includes case studies and discussion of how specific conditions affect transitions of care in different ways Addresses the physical and emotional effects of transitions on patients and caregivers
