 Telemedicine—the use of information and telecommunications technologies to provide and support health care when distance separates the participants—is receiving increasing attention not only in remote areas where health care access is troublesome but also in urban and suburban locations. Yet the benefits and costs of this blend of medicine and digital technologies must be better demonstrated before today's cautious decision-makers invest significant funds in its development. Telemedicine presents a framework for evaluating patient care applications of telemedicine. The book identifies managerial, technical, policy, legal, and

human factors that must be taken into account in evaluating a telemedicine program. The committee reviews previous efforts to establish evaluation frameworks and reports on results from several completed studies of image transmission, consulting from remote locations, and other telemedicine programs. The committee also examines basic elements of an evaluation and considers relevant issues of quality, accessibility, and cost of health care. Telemedicine will be of immediate interest to anyone with interest in the clinical application of telemedicine. *World Radio TV Handbook, 1998* Beaver's Pond Press

Ever since Newton Minow taught us sophisticates to bemoan the descent of television into a vast wasteland, the dyspeptic chorus of jeremiahs who insist that television news in particular has gone from gold to dross gets noisier and noisier. Charles Ponce de Leon says here, in effect, that this is misleading, if not simply fatuous. He argues in this well-paced, lively, readable book that TV news has changed in response to broader changes in the TV industry and American culture. It is pointless to bewail its decline. "That's the Way It Is" gives us the very first history of American television news, spanning more than six decades, from Camel News Caravan to Countdown with Keith Oberman and The Daily Show. Starting in the latter 1940s, television news featured a succession of broadcasters who became household names, even presences: Eric Sevareid, Walter Cronkite, David Brinkley, Peter Jennings, Brian Williams, Katie Couric, and, with cable expansion, people like Glenn Beck, Jon Stewart, and Bill O'Reilly. But behind the scenes, the parallel story is just as interesting, involving executives, producers, and journalists who were responsible for the field's most important innovations. Included with mainstream network news programs is an engaging treatment of news magazines like "60 Minutes" and "20/20," as well as morning news shows like "Today" and "Good Morning America." Ponce de Leon gives ample attention to the establishment of cable networks (CNN, and the later competitors, Fox News and MSNBC), mixing in colorful anecdotes about the likes of Roger Ailes and Roone Arledge. Frothy features and other kinds of entertainment have been part and parcel of TV news from the start; viewer preferences have always played a role in the evolution of programming, although the disintegration of a national culture since the 1970s means that most of us no longer follow the news as a civic obligation. Throughout, Ponce de Leon places his history in a broader cultural context, emphasizing tensions between the public service mission of TV news and the quest for profitability and broad appeal."

Drivers speeding across Missouri on I-70 don't know what they're missing. But Ted Cable and LuAnn Cadden do: untold attractions right along the highway between St. Louis and Kansas City. Driving across Missouri is packed with fun-filled information, stories, and trivia that help travelers look beyond the passing blur to appreciate the "Show Me" state's unique landscapes and landmarks. Its authors unfold the natural beauty of the state's flora, fauna, and rivers (including two of the world's largest); introduce the history of Native Americans, French explorers, and German settlers; reopen routes traveled by Daniel Boone and Lewis and

Clark; and bring the Civil War era to life. The entries are tied to mile markers for travelers driving either east or west—no need to "transpose," because the authors have done it for you. Cable and Cadden tell the story behind Boone's Lick Trail at mile marker 194.0 and point out likely roosts for red-tailed hawks. They entice you to take Exit 170 to explore Graham Cave State Park, or 148 to visit the Winston Churchill Memorial at Fulton. And within the city limits of Kansas City and St. Louis, where mile markers often aren't visible, they guide the reader to notable features like the former's Jazz Museum or the latter's landmark churches. Graced with dozens of illustrations and an ample array of lively anecdotes, *Driving across Missouri* provides more detail for "ordinary" landscape features than can be found in most other guidebooks, whether relating the story behind the "Meramec barn" or using cornfields as a point of departure to discuss "Missouri Meerschaums"—the corncob pipe. Through their vastly entertaining book, Cable and Cadden help to slow things down in the fast lane so that travelers can enjoy Missouri's land and history, while simultaneously making a long trip pass more quickly with stories that interpret the spirit of this great "Show Me" state. And, used in conjunction with *Driving across Kansas*, readers can now enjoy the ride all the way from the Gateway Arch to the Colorado state line and back again.

From Elvis and a hound dog wearing matching tuxedos and the comic adventures of artificially produced bands to elaborate music videos and contrived reality-show contests, television--as this critical look brilliantly shows--has done a superb job of presenting the energy of rock in a fabulously entertaining but patently "fake" manner. The dichotomy of "fake" and "real" music as it is portrayed on television is presented in detail through many generations of rock music: the Monkees shared the charts with the Beatles, Tupac and Slayer fans voted for corny American Idols, and shows like "Shindig!" and "Soul Train" somehow captured the unhinged energy of rock far more effectively than most long-haired guitar-smashing acts. Also shown is how TV has often delighted in breaking the rules while still mostly playing by them: Bo Diddley defied Ed Sullivan and sang rock and roll after he had been told not to, the Chipmunks' subversive antics prepared kids for punk rock, and things got out of hand when "Saturday Night Live" invited punk kids to attend a taping of the band Fear. Every aspect of the idiosyncratic history of rock and TV and their peculiar relationship is covered, including cartoon rock, music programming for African American audiences, punk on television, Michael Jackson's life on TV, and the tortured history of MTV and its progeny.
