 In 1918, the Italian-Americans of New York, the Yupik of Alaska, and the Persians of Mashed had almost nothing in common except for a virus -- one that triggered the worst pandemic of modern times and had a decisive effect on twentieth-century

history. The Spanish flu of 1918-1920 was one of the greatest human disasters of all time. It infected a third of the people on Earth -- from the poorest immigrants of New York City to the king of Spain, Franz Kafka, Mahatma Gandhi, and Woodrow Wilson. But despite a death toll of between 50 and 100 million people, it exists in our memory as an afterthought to World War I. In this

gripping narrative history, Laura Spinney traces the overlooked pandemic to reveal how the virus travelled across the globe, exposing mankind's vulnerability and putting our ingenuity to the test. As socially significant as both world wars, the Spanish flu dramatically disrupted -- and often permanently altered -- global politics, race relations and family structures,

while spurring innovation in medicine, religion and the arts. It was partly responsible, Spinney argues, for pushing India to independence, South Africa to apartheid, and Switzerland to the brink of civil war. It also created the true "lost generation." Drawing on the latest research in history, virology, epidemiology, psychology and economics, Pale Rider masterfully recounts the	little-known catastrophe that forever changed humanity. <i>The End of Poverty</i> SHARC-FM This is a guide to recommended practices for crime scene investigation. The guide is presented in five major sections, with sub-sections as noted: (1) Arriving at the Scene: Initial Response/Prioritization of Efforts (receipt of information, safety procedures, emergency care, secure and control	persons at the scene, boundaries, turn over control of the scene and brief investigator/s in charge, document actions and observations); (2) Preliminary Documentation and Evaluation of the Scene (scene assessment, "walk-through" and initial documentation); (3) Processing the Scene (team composition, contamination control, documentation and prioritize,

collect, preserve, inventory, package, transport, and submit evidence); (4) Completing and Recording the Crime Scene Investigation (establish debriefing team, perform final survey, document the scene); and (5) Crime Scene Equipment (initial responding officers, investigator/evidence technician, evidence collection kits).

Primates of the World
Penguin
"A fascinating meditation on the many ways traveling through time can change a person."—HelloGiggles "This genre-bending, time-bending debut will appeal to fans of Doctor Who, dystopian fiction, and life's great joy:

friend groups."—Refinery29 An "astonishing" time-travel debut about science and friendship, perfect for fans of The Power and Hidden Figures (The New York Times) In 1967, four female scientists worked together to build the world's first time machine. But just as they are about to debut their creation, one of them suffers a breakdown, putting the whole

project—and future of time travel—in jeopardy. To protect their invention, one member is exiled from the team—erasing her contributions from history. 50 years later, time travel is a big business. 20-something Ruby Rebello knows her beloved grandmother, Granny Bee, was one of the pioneers, though no one will tell her more. But when Bee receives a mysterious newspaper

clipping from the future reporting the murder of an unidentified woman, Ruby becomes obsessed: could it be Bee? Who would want her dead? And most importantly of all: can her murder be stopped? Traversing the decades and told from alternating perspectives, *The Psychology of Time Travel* introduces a fabulous new voice in fiction and a new must-read for fans of speculative

fiction and women's fiction alike. **The Emperor of All Maladies** Springer Publishing Company Bringing together the experience, perspective and expertise of Paul Farmer, Jim Yong Kim, and Arthur Kleinman, *Reimagining Global Health* provides an original, compelling introduction to the field of global health. Drawn from a Harvard course developed by their student

Matthew Basilico, this work provides an accessible and engaging framework for the study of global health. Insisting on an approach that is historically deep and geographically broad, the authors underline the importance of a transdisciplinary approach, and offer a highly readable distillation of several historical and ethnographic perspectives of contemporary global health problems. The

case studies presented throughout Reimagining Global Health bring together ethnographic, theoretical, and historical perspectives into a wholly new and exciting investigation of global health. The interdisciplinary approach outlined in this text should prove useful not only in schools of public health, nursing, and medicine, but also in undergraduate and graduate classes in anthropology,

sociology, political economy, and history, among others. **Jackson Pollock** Crooked Lane Books The most comprehensive account to date of the 9/11 attack on the Pentagon and aftermath, this volume includes unprecedented details on the impact on the Pentagon building and personnel and the scope of the rescue, recovery, and caregiving effort. It features 32 pages of

photographs and more than a dozen diagrams and illustrations not previously available.

disgust for their consumption. Although the majority of consumed insects are gathered in forest habitats, mass-rearing systems are being developed in many countries. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of

insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them

for food and feed. It examines the body of research on issues such as insect nutrition and food safety, the use of insects as animal feed, and the processing and preservation of insects and their products. It highlights the need to develop a regulatory framework to govern the use of insects for food security. And it presents case studies and examples from around the world.

Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. To fully realise this potential, much work needs to be done by a wide range of stakeholders. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life,

and it will stimulate debate on the expansion of the use of insects as food and feed. *Invisible Child* Springer

Simultaneous

eBook. **Oxford Handbook of Clinical Diagnosis** Advanced Assessment Interpreting Findings and Formulating Differential Diagnoses Dr. Alla Shapiro was a first responder to the worst nuclear disaster in history -- the explosion at the Chernobyl Nuclear Power Station in Ukraine on April 26, 1986. First responders were NOT given detailed instructions or protective clothing. Amid

an eerie and pervasive silence, Dr. Shapiro treated traumatized children and witnessed frightened families and civilians running barefoot across radioactive grounds and carrying stretchers to save others. First responders triaged and administered first aid, extinguished fires and cleaned up radioactive debris. No protocols were in place since no one

considered the possibility of a nuclear accident. From the outset of the disaster the Soviet government worsen matters by spreading misinformation. First-responders were ordered to be part of the deception of the public. This bureaucratic cover-up during angered and disheartened Dr. Shapiro. This painful experience along with the decades of persistent professional

and personal discrimination and hostility that she and her family, as Jewish citizens of the USSR, endured, led her and her family like thousands of others to leave and flee the oppressive Soviet Union in the late 1980s. As Émigrés they were restricted to taking possessions weighing no more than 40 pounds and \$90 in cash. Their escape route took them first to Vienna and then on to Italy for six

months. By then four generations of Dr. Shapiro's family were among these "stateless" people.

Chernobyl changed Dr. Shapiro's life and career forever.

Arriving in the U.S., like all immigrants she had to learn a new language, encountered red tape validating her diplomas, and find housing for her family When U.S.

authorities failed to fully validate her medical diplomas, she re-enrolled in

medical school at Georgetown University and restarted her career and new life in America.

Spurred on by her Chernobyl experiences, she rose to become one of the world's leading expert's in medical countermeasures against radiation exposure. For thirty years she worked for the FDA on disaster readiness and preparation- and has a much to say about America's readiness or

lack of readiness for the current pandemic affecting the United States and the world.

R. Martin), acclaimed author Scott

Lynch continues to astound and entertain with his thrillingly inventive, wickedly funny, suspense-filled adventures featuring con artist extraordinaire Locke Lamora. And *The Republic of Thieves* is his most captivating novel yet. NAMED ONE OF PASTE'S BEST FANTASY BOOKS OF THE DECADE With what should have been the greatest heist of their career gone

spectacularly sour, Locke and his trusted partner, Jean, have barely escaped with their lives. Or at least Jean has. But Locke is slowly succumbing to a deadly poison that no alchemist or physiker can cure. Yet just as the end is near, a mysterious Bondsmage offers Locke an opportunity that will either save him or finish him off once and for all. Magi political elections are imminent, and the factions

are in need of a pawn. If Locke agrees to play the role, sorcery will be used to purge the venom from his body—though the process will be so excruciating he may well wish for death. Locke is opposed, but two factors cause his will to crumble: Jean’s imploring—and the Bondsmage’s mention of a woman from Locke’s past: Sabetha. She is the love of his life, his equal in skill

and wit, and now, his greatest rival. Locke was smitten with Sabetha from his first glimpse of her as a young fellow orphan and thief-in-training. But after a tumultuous courtship, Sabetha broke away. Now they will reunite in yet another clash of wills. For faced with his one and only match in both love and trickery, Locke must choose whether to fight Sabetha—or to woo her. It is a decision
