This note analyzes the stress experienced (and caused) by open-end mutual funds during the March COVID-19 stress episode, with a focus on global fixed-income funds. In light of increased valuation uncertainty, funds experienced a short period of intense withdrawals while the market liquidity of their holdings deteriorated substantially. To cover redemptions, afflicted funds predominantly shed liquid assets first—for example, cash, cash equivalents, and US Treasury securities. But forced asset sales amplified price pressures in markets and contributed to liquidity falling across fixed-income markets. This drop in market liquidity, as well as the general stress in financial markets, may have led to fund investors becoming even more sensitive to challenging portfolio performance and encouraged further withdrawals. Only after central banks intervened, directly and indirectly supporting asset managers, did liquidity and redemption stress subside. Overall, the March episode validated the financial-stability concerns about liquidity vulnerabilities in the fund industry and calls for further action to address them.

Income Investing Today Income Investing Today details a safe alternative to the downside risks inherent in the stock market--income securities that can provide a 7% to 8% annual cash income. With this book, fixed income expert Richard Lehmann outlines income investing concepts you need to understand, various investment vehicles, and investment strategies that will help you build a safe, diversified portfolio of investments. The investment vehicles he explains range well beyond traditional fixed income securities or creditor instruments such as bonds, to include hybrids, REITs, mutual funds, and more. He shows that the key to building a steady, growth-oriented income portfolio is to diversify over a variety of securities that depend on different drivers--that is, portfolios that are not vulnerable to any one specific economic factor such as interest rates. The ideal guide for individual investors saving for retirement and seeking more safety in their portfolios, Income Investing Today shows how a diversified collection of income securities can equal or exceed the returns from common stock with much lower risk.

Trading the Fixed Income, Inflation and Credit Markets is a comprehensive guide to the most popular strategies that are used in the wholesale financial markets, answering the question: what is the optimal way to express a view on expected market movements? This relatively unique approach to relative value highlights the pricing links between the different products and how these relationships can be used as the basis for a number of trading strategies. The book begins by looking at the main derivative products and their pricing interrelationships. It shows that within any asset class there are mathematical relationships that tie together four key building blocks: cash products, forwards/futures, swaps and options. The nature of these interrelationships means that there may be a variety of different ways in which a particular strategy can be expressed. It then moves on to relative value within a fixed income context and looks at strategies that build on the pricing relationships between products as well as those that focus on how to identify the optimal way to express a view on the movement of the yield curve. It concludes by taking the main themes of relative value and showing how they can be applied within other asset classes. Although the main focus is fixed income the book does cover multiple asset classes including credit and inflation. Written from a practitioner's perspective, the book illustrates how the products are used by including many worked examples and a number of screenshots to ensure that the content is as practical and applied as possible.
