 The eye-arresting images in this original contemporary art book feature two popular mediums, painting and photography. Although the art is inspired by the Long Island landscape, its visual appeal in artists' interpretations of locations is universal. Paired with the dialog of the artists, the narrative becomes an intimate conversation with the reader. Combining life, loss, serendipity and art, it portrays two artists, whose conceptually similar work evolved independently until social media brought them together. Their collaboration continues to produce treasures of stunning, memorable beauty. The improbable pairing of Holly Gordon, photographer from Bay Shore, Long Island, and Ward Hooper, painter from Northport, Long Island, is a symbiotic match. Their artistic relationship is an affirmation of the human spirit in an age where most can't seem to detach from objects. These two contemporary artists discovered a serendipitous connection to the earlier American artistic and personal alliance of Arthur Dove and Helen Torr, whose work was inspired by the same Long Island locations. The past thus joined the present, deepening Gordon and Hooper's bond, both personally and geographically. In Gordon and Hooper's intimate relationship there is a sense of empathy, connection, and mutual discovery that is invincible. Ward Hooper and Holly Gordon understand that the meaning of their journey extends beyond themselves. Their camaraderie and brilliant exposition beckons others to do the same and thereby reach their own heights in art and life. The transformative journey that unfolds centers on art as a positive force that ultimately unites two creative spirits. I found the imagery captivating and the text inspirational. Learning about how these two people from different art disciplines came together to help heal and enrich each others' lives (and create wonderful imagery throughout the process) made me appreciate my life and relationships even more. The book may even encourage you to create something new, or collaborate with someone you already know...or someone who is out there waiting to be a part of your "Light's Journey." -- Andrew Darlow, Photographer, Educator and AuthorA love story of friendship and renewal. Holly and Ward were meant to meet to discover their connection through art and nature. Two wonderful

artists exploring life together through the warmth of colors, brush and lens strokes and subjects they created separately at different times and then together revealing their deep passion for life, friendship and art. --Charlee M. Miller, Executive Director, Art League of Long Island, Dix Hills, N.Y. **Parallel Perspectives: The Brush/Lens Project** gives us seamlessly created images that work on many levels: They pay attention to tiny details yet pulse with large swaths of vibrant color. They look like paintings — but they could be photographs, and vice versa. These are eye-arresting scenes, a visual harvest of the natural beauty that surrounds us, creating lasting sights that celebrate what talented artists have always quested for: the light. Holly Gordon finds images and builds digital layers that blend an unflinching assessment by a documentary photographer and environmentalist with a painterly sensitivity; Ward Hooper's loose brushstrokes capture the ever-shifting light and shadow through watercolors that are as elusive as the light. Their collaboration continues to produce treasures of stunning, memorable beauty.—Annie Wilkinson Blachley's features and cover stories have been published by The New York Times, Los Angeles Times, and national and regional newspapers and magazines. She is a copy editor and columnist for the Long Island Press and writes several monthly columns for Long Island Woman Magazine

 Under the Earth's surface is a rich array of geological resources, many with potential use to humankind. However, extracting and harnessing them comes with enormous uncertainties, high costs, and considerable risks. The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable. This volume provides real-world

examples relating to oilfields, geothermal systems, contaminated sites, and aquifer recharge. Volume highlights include: • A multidisciplinary treatment of uncertainty quantification • Case studies with actual data that will appeal to methodology developers • A Bayesian evidential learning framework that reduces computation and modeling time
Quantifying Uncertainty in Subsurface Systems is a multidisciplinary volume that brings together five major fields: information science, decision science, geosciences, data science and computer science. It will appeal to both students and practitioners, and be a valuable resource for geoscientists, engineers and applied mathematicians. Beyond the Screen presents an expanded conceptualization of cinema which encompasses the myriad ways film can be experienced in a digitally networked society where the auditorium is now just one location amongst many in which audiences can encounter and engage with films. The book includes considerations of mobile, web, social media and live cinema through numerous examples and case studies of recent and near-future developments. Through analyses of narrative, text, process, apparatus and audience this book traces the metamorphosis of an emerging cinema and maps the new spaces of spectatorship which are currently challenging what it means to be cinematic in a digitally networked era.

 This two-volume set investigates the evangelical presence in America as experienced through digital media, examining current evangelical ideologies regarding education, politics, family, and government. Evangelical broadcasting has greatly expanded its footprint in the digital age. This informative text acquaints readers with how the electronic church of today spreads its message through Internet podcasts, social networking, religious radio programs, and televised sermons; how mass media forms the institution's modern identity; and what the future of the industry holds as mobile church apps, Christian-based video games, and online worship become the norm. The work—split into two volumes—reveals the ways that the Christian broadcast community affects evangelical traditions and influences American society in general. Volume 1 explores how electronic media shapes today's Christian subculture, while the second volume describes how the electronic church impacts the wider American culture, analyzing what key figures in evangelical mass media are saying about today's religious, political, economic, and social issues. The set concludes by addressing criticism about religious media and the prospects of American public discourse to accommodate both secular and religious voices.

The media industry is in transition. While some changes are readily apparent, we have not even begun to understand the impact of others. The result is one of the most fascinating times in the history of media. As digital technologies accelerate the pace of change in all facets of our lives, researchers and practitioners are exploring its impact on traditional media and social interaction. *Transitioned Media* brings together leading academics and media industry executives to identify and analyze the most transformative trends and issues. Themes include the effect of digital technologies on consumer behavior, new approaches to advertising and branding, social networks, the blogosphere and impact of "citizen" journalism, music and intellectual property rights, digital cinema, and video games. Underlying the chapters is an economic perspective, with an emphasis on how new business models are being developed that take the social dimensions of digital technologies into account. The result is a unique perspective on the digital media landscape and the forces that will shape it in the future.

Television has become a ubiquitous part of our lives, and yet its impact continues to evolve at an extraordinary pace. The evolution of television from analog to digital technology has been underway for more than half a century. Today's digital technology is enabling a myriad of new entertainment possibilities. From jumbotrons in cyberspace to multi-dimensional viewing experiences, digital technology is changing television. Consequently, new advertising metrics that reflect the new viewer habits are emerging. The ability to capture a viewer's interactions changes the advertising proposition. Telephone and wireless companies are challenging the traditional mass media providers - broadcasters, cable and satellite companies - and they're all finding ways to deliver TV programming, video content and Internet offerings to large and small screens in the home and on the go. This volume showcases insights from industry insiders and researchers from a variety of disciplines. It explores the economic, cultural, technical, and policy implications of digital television, addressing such questions as: How will content be monetized in the future? What programming opportunities become possible with the advent of going digital? Will content still be king or will the conduits gain the upper hand? This book analyzes the digital television evolution: its impacts on the economics of the TV industry, its significance for content creation from Hollywood blockbusters to You Tube, the changing role of the consumer, and what's coming next to a theatre near you.

Cloud computing has provided multiple advantages as well as challenges to software and infrastructure services. In order to be fully beneficial, these challenges facing cloud specific communication protocols must be addressed. *Communication Infrastructures for Cloud Computing* presents the issues and research directions for a broad range of cloud computing aspects of software, computing, and storage systems. This book will highlight a broad range of topics in communication infrastructures for cloud computing that will benefit researchers, academics, and practitioners in the active fields of engineering, computer science, and software.

This book addresses the fundamental requirement for an interdisciplinary catchment based approach to managing and protecting water resources that crucially includes an understanding of land use and its management. In this approach the hydrological cycle links mountains to the sea, and ecosystems in rivers, groundwaters, lakes, wetlands, estuaries and coasts forming an essential continuum directly influenced by human activity. The book provides a synthesis of current and future thinking in catchment management, and shows how the specific problems that arise in water use policy can be addressed within the context of an integrated approach to management. The book is written for advanced students, researchers, fellow academics and water sector professionals such as planners and regulators. The intention is to highlight examples and case studies that have resonance not only within natural sciences and engineering but with academics in other fields such as socio-economics, law and policy.

Even as the television industry experiences significant transformation and disruption in the face of streaming and online delivery, the television channel itself persists. If anything, the television channel landscape has become more complex to navigate as viewers can now choose between broadcast, cable, streaming, and premium services across a host of different platforms and devices. *From Networks to Netflix* provides an authoritative answer to that navigational need, helping students, instructors, and scholars understand these industrial changes through the lens of the channel. Through examination of emerging services like Hulu and Amazon Prime Video, investigation of YouTube channels and cable outlets like Freeform and Comedy Central, and critiques of broadcast giants like ABC and PBS, this book offers a concrete, tangible means of exploring the foundations of a changing industry.

Through a remarkable combination of intellect, self-confidence, engaging humility, and prodigious output of published work, William R. Dickinson influenced and challenged three generations of sedimentary geologists, igneous petrologists, tectonicists, sandstone petrologists, archaeologists, and other geoscientists. A key figure in the plate-tectonic revolution of the 1960s and 1970s, he explained how the distribution of sediments on Earth's surface could be traced to tectonic processes, and is widely recognized as a founder of modern sedimentary basin analysis. This volume consists of 31 chapters related to Dickinson's research interests; many of the authors are his former students, their students, and their students' students, demonstrating his continuing profound influence. The papers in this volume are an impressive tribute to the depth and breadth of Bill Dickinson's contributions to the

geosciences.

Just ten years ago, discussions of Latina/o media could be safely reduced to a handful of TV channels, dominated by Univision and Telemundo. Today, dramatic changes in the global political economy have resulted in an unprecedented rise in major new media ventures for Latinos as everyone seems to want a piece of the Latina/o media market. While current scholarship on Latina/o media have mostly revolved around important issues of representation and stereotypes, this approach does not provide the entire story. In *Contemporary Latina/o Media*, Arlene Dávila and Yeidy M. Rivero bring together an impressive range of leading scholars to move beyond analyses of media representations, going behind the scenes to explore issues of production, circulation, consumption, and political economy that affect Latina/o mass media. Working across the disciplines of Latina/o media, cultural studies, and communication, the contributors examine how Latinos are being affected both by the continued Latin Americanization of genres, products, and audiences, as well as by the whitewashing of "mainstream" Hollywood media where Latinos have been consistently bypassed. While focusing on Spanish-language television and radio, the essays also touch on the state of Latinos in prime-time television and in digital and alternative media. Using a transnational approach, the volume as a whole explores the ownership, importation, and circulation of talent and content from Latin America, placing the dynamics of the global political economy and cultural politics in the foreground of contemporary analysis of Latina/o media.
