A New York Times bestseller 'A sensation ... a rollicking tale well told' - The Times
At the heart of *Born to Run* lies a mysterious tribe of Mexican Indians, the Tarahumara, who live quietly in canyons and are reputed to be the best distance runners in the world; in 1993, one of them, aged 57, came first in a prestigious 100-mile race

wearing a toga and sandals. A small group of the world's top ultra-runners (and the awe-inspiring author) make the treacherous journey into the canyons to try to learn the tribe's secrets and then take them on over a course 50 miles long. With incredible energy and smart observation, McDougall tells this story while asking what the secrets are to being an

incredible runner. Travelling to labs at Harvard, Nike, and elsewhere, he comes across an incredible cast of characters, including the woman who recently broke the world record for 100 miles and for her encore ran a 2:50 marathon in a bikini, pausing to down a beer at the 20 mile mark.

This Handbook provides a comprehensiv

e and international representation of state-of-the-art research, theory, and practice related to principal areas in which significant developments are occurring in the study of literacy and technology. It offers a glimpse of the commonalities faced by literacy educators around the world, together with specific challenges raised by unique circumstances. Volume I of this Handbook

endeavored to lay essential groundwork for the study of literacy and technology; it retains an explanatory value that will not weaken over time. Volume II differs considerably in conception. It assumes for the most part a higher level of expertise on the part of readers, and the projects and applications described by the contributors are characterized by greater sophistication. The scope of

technology use is broader, and the challenges that have emerged are in sharper focus. A powerful feature of this volume is the addition of commentaries from experts across the field on the potential of technology in key dimensions of literacy. The title of Volume II has changed slightly to reflect the inclusion of contributions on a broad geographic basis. It is now a truly international

Handbook, with chapter authors from six countries and five continents. The International Handbook of Literacy and Technology: Volume II is organized in five sections: *The Role of Technology in the New Literacies; *Technology Applications with Specific Populations; *Literacy Software and the Internet; *Teacher Education and Professional Development; and *The Potential of Technology in

Multimedia technology

has the potential to evolve the paradigm of end user computing, from the interactive text and graphics model that has developed since the 1950s, into one more compatible with the digital electronic world of the next century.

Decreasing hardware costs, a relatively inexpensive storage capacity and a rapid increasing

computing power and network bandwidth, all major requirements of multimedia applications, have contributed to the recent tremendous growth in production and use of multimedia contents.

Interactive Multimedia Systems addresses these innovative technologies and how they can positively impact a variety of areas.
