Master the role of the physical therapist or physical therapist assistant in neurologic rehabilitation! *Neurologic Interventions for Physical Therapy, 3rd Edition* helps you develop skills in the treatment interventions needed to improve the function of patients with neurologic deficits. It provides a solid foundation in neuroanatomy, motor control, and motor development, and offers clear, how-to guidelines to rehabilitation procedures. Case studies help you follow best practices for the treatment of children and adults with neuromuscular impairments caused by events such as spinal cord injuries, cerebral palsy, and traumatic brain injuries. Written by physical therapy experts Suzanne 'Tink' Martin and Mary Kessler, this market-leading text will

help you prepare for the neurological portion of the PTA certification exam and begin a successful career in physical therapy practice. Comprehensive coverage of neurologic rehabilitation explores concepts in neuroanatomy, motor control and motor learning, motor development, and evidence-based treatment of adults and children with neuromuscular impairments. Over 700 photos and drawings clarify concepts, show anatomy, physiology, evaluation, and pathology, and depict the most current rehabilitation procedures and technology. Case studies demonstrate the patient examination and treatment process, and show how to achieve consistency in documentation. Proprioceptive Neuromuscular Facilitation chapter describes how PNF

can be used to improve a patient's performance of functional tasks by increasing strength, flexibility, and range of motion - key to the treatment of individuals post stroke. Review questions are included at the end of each chapter, with answers at the back of the book. Illustrated step-by-step intervention boxes, tables, and charts highlight important information, and make it easy to find instructions quickly. Use of language of the APTA Guide to Physical Therapist Practice ensures that you understand and comply with best practices recommended by the APTA. NEW photographs of interventions and equipment reflect the most current rehabilitation procedures and technology. UPDATED study resources on the Evolve companion website

include an intervention collection, study tips, and additional review questions and interactive case studies.

Traumatic Brain Injury Elsevier Health Sciences

In *After War* Zoë H. Wool explores how the American soldiers most severely injured in the Iraq and Afghanistan wars struggle to build some kind of ordinary life while recovering at Walter Reed Army Medical Center from grievous injuries like lost limbs and traumatic brain injury. Between 2007 and 2008, Wool spent time with many of these mostly male soldiers and their families and loved ones in an effort to understand what it's like to be blown up and then pulled toward an ideal and ordinary civilian life in a place where the possibilities of such a life are called into

question. Contextualizing these soldiers within a broader political and moral framework, Wool considers the soldier body as a historically, politically, and morally laden national icon of normative masculinity. She shows how injury, disability, and the reality of soldiers' experiences and lives unsettle this icon and disrupt the all-too-common narrative of the heroic wounded veteran as the embodiment of patriotic self-sacrifice. For these soldiers, the uncanny ordinariness of seemingly extraordinary everyday circumstances and practices at Walter Reed create a reality that will never be normal.

Despite numerous studies, a lack of consensus still exists over many aspects of patellofemoral pain, instability, and arthritis. This book adopts an evidence-

based approach to assess each of these topics in depth. The book reviews general features of clinical examination and global evaluation techniques including the use of different imaging methods, e.g. x-rays, CT, MRI, stress x-rays, and bone scan. Various conservative and surgical treatment approaches for each of the three presentations – pain, instability, and arthritis – are then explained and assessed. Postoperative management and options in the event of failed surgery are also evaluated. Throughout, careful attention is paid to the literature in an attempt to establish the level of evidence for the efficacy of each imaging and treatment method. It is hoped that this book will serve as an informative guide for the practitioner when

confronted with disorders of the patellofemoral joint.

This book provides the tools and information so the health care professional can think differently about caring for this patient and see through

his or her eyes. The presentations of 28 contributors share the importance of early, continuous, coordinated, and individualized care that is integrated into the existing health care system. Examples of models and policies that have improved the access, experience, and outcomes for patients with ASD are shared. In addition, the importance of continuous quality improvement through data collection and monitoring of outcomes is emphasized. This information is essential for addressing the capacity crisis now in providing routine, specialized, and emergency care for individuals with ASD. Some of the major topics discussed include: the epidemiology of autism spectrum disorder; facilitating the role of parents in management and advocacy; the

impact of the sensory environment on care; medications for the treatment of psychiatric comorbidities; frameworks to guide practice and research with patients; building a home for acute care needs; assisting parents in adapting and making decisions regarding treatment options; integrating genetic testing into health care; educating nurses with faculty and curricular issues; emergency medicine and improving service; physical therapy to promote health, function, and community participation; using big data to direct quality improvement; and monitoring patient outcomes in research and policy outcomes. This significant volume brings together a wealth of expertise with information and strategies across the lifespan for individuals with autism

spectrum disorder.
