The Executive's Guide to AI and Analytics

JERAMIAH GREGORY

The Years that Matter Most Materials, Circuits and Device

Analyzing and Securing Social Networks focuses on the two major technologies that have been developed for online social networks (OSNs): (i) data mining technologies for analyzing these networks and extracting useful information such as location, demographics, and sentiments of the participants of the network, and (ii) security and privacy technologies that ensure the privacy of the participants of the network as well as provide controlled access to the information posted and exchanged by the participants. The authors explore security and privacy issues for social media systems, analyze such systems, and discuss prototypes they have developed for social media systems whose data are represented using semantic web technologies. These experimental systems have been developed at The University of Texas at Dallas. The material in this book, together with the numerous references

listed in each chapter, have been used for a graduate-level course at The University of Texas at Dallas on analyzing and securing social media. Several experimental systems developed by graduate students are also provided. The book is divided into nine main sections: (1) supporting technologies, (2) basics of analyzing and securing social networks, (3) the authors' design and implementation of various social network analytics tools, (4) privacy aspects of social networks, (5) access control and inference control for social networks, (6) experimental systems designed or developed by the authors on analyzing and securing social networks, (7) social media application systems developed by the authors, (8) secure social media systems developed by the authors, and (9) some of the authors' exploratory work and further directions.

Innovation, Entrepreneurship, and the Economy in the US, China, and India

McGraw-Hill Humanities, Social Sciences & World Languages

Secure data science, which integrates cyber security and data science, is becoming one of the critical areas in both cyber security and data science. This is because the novel data science techniques being developed have applications in solving such cyber security problems as intrusion detection, malware analysis, and insider threat detection. However, the data science techniques being applied not only for cyber security but also for every application area—including healthcare, finance, manufacturing, and

marketing—could be attacked by malware. Furthermore, due to the power of data science, it is now possible to infer highly private and sensitive information from public data, which could result in the violation of individual privacy. This is the first such book that provides a comprehensive overview of integrating both cyber security and data science and discusses both theory and practice in secure data science. After an overview of security and privacy for big data services as well as cloud computing, this book describes applications of data science for cyber security applications. It also discusses such applications of data science as malware analysis and insider threat detection. Then this book addresses trends in adversarial machine learning and provides solutions to the attacks on the data science techniques. In particular, it discusses some emerging trends in carrying out trustworthy analytics so that the analytics techniques can be secured against malicious attacks. Then it focuses on the privacy threats due to the collection of massive amounts of data and potential solutions. Following a discussion on the integration of services computing, including cloud-based services for secure data science, it looks at applications of secure data science to information sharing and social media. This book is a useful resource for researchers, software developers, educators, and managers who want to understand both the high level concepts and the technical details on the design and implementation of secure data science-based systems. It

can also be used as a reference book for a graduate course in secure data science. Furthermore, this book provides numerous references that would be helpful for the reader to get more details about secure data science.

Barron's Compact Guide to Colleges CRC Press

This volume constitutes the proceedings of the 19th International Symposium on Mathematical Foundations of Theoretical Computer Science, MFCS '94, held in Kosice, Slovakia in August 1994. MFCS '94 brought together specialists in theoretical fields of computer science from various countries in order to stimulate mathematical research in theoretical computer science. Besides 12 papers based on invited talks by renowned experts, the book contains 42 research contributions selected from a total of 112 submissions. All areas of theoretical computer science are presented, some from a particular mathematical point of view.

Semiconductor Nanolasers Oxford University Press

"This book provides a thorough understanding of issues and concerns in information technology security"--Provided by publisher.

Functionality-Enhanced Devices DIANE Publishing

While the students and teachers of Class Two are absorbed in looking at various zoo animals, a sneaky anaconda gobbles them up, until Molly sees what is happening and saves the day.

It's All Analytics! Springer Science & Business Media

This smaller version of Barron's definitive Profiles of American Colleges presents detailed descriptions of more than 400 accredited four-year schools that fall mainly within the top three categories of Barron's exclusive academic competitiveness scale. Updated with the latest facts and figures, each of the Compact Guide's college profiles includes information on admission requirements, academic programs, tuition and fees, available financial aid, library and computer facilities, student-faculty ratios, and much more.

Data Mining for Business Analytics Walter de Gruyter GmbH & Co KG

The first detailed study of this most important class of systems which contain internal predictive models of themselves and/or of their environments and whose predictions are utilized for purposes of present control. This book develops the basic concept of a predictive model, and shows how it can be embedded into a system of feedforward control. Includes many examples and stresses analogies between wired-in anticipatory control and processes of learning and adaption, at both individual and social levels. Shows how the basic theory of such systems throws a new light both on analytic problems (understanding what is going on in an organism or a social system) and synthetic ones (developing forecasting methods for making individual or collective decisions).

Probably Someday Cancer JHU Press

Methods in Behavioral Research is a concise introduction to research

methods for psychology and behavioral science courses. It has been THE best selling text in this course for at least fifteen years, and is considered by many as the default student-friendly text for research methods, the one that students will read.

Global Collective Action Cambridge University Press

Presenting a clear visual guide to understanding the human central nervous system, this second edition includes numerous four-color illustrations, photographs, diagrams, radiographs, and histological material throughout the text. Organized and easy to follow, the book presents an overview of the CNS, sensory, and motor systems and the limbic system

Humanities Scholar in Residence CRC Press

"This book adopts an intersectional approach to explore important topics related to women's health in the early 21st century, including factors that impact physical, social, psychological, intellectual, and spiritual well-being, as well as the perspectives of diverse groups of women"--

The Directory of Corporate and Foundation Givers CRC Press

The book consists of 13 chapters and looks at materials and device research related to functionality-enhanced devices and also the applications and design techniques of functionality-enhanced devices.

Statistical Relational Artificial Intelligence CRC Press

With public colleges and universities

facing substantial budget cuts and increased calls for accountability, more institutions now rely on private revenue streams for support. As market-driven policies and behaviors become more commonplace, some cautious critics sound the alarm, while others watching the bottom line cheer. But which perspective gets it right? Does the privatization of public higher education threaten its very mission or support it? In this collection of essays, economists, policy makers, political scientists, sociologists, and organizational researchers discuss the impact of privatization from their respective disciplinary perspectives and assess its implications for the future of higher education. Privatization may bring additional funds and services that are free from government regulations and oversight, but does it also allow private interests to have undue influence over public higher education? Should public universities have to compete in the economic marketplace as vigorously as they do in the marketplace of ideas? What are the implications when institutions of higher learning function like businesses? With privatization now a reality for most public colleges and universities, an objective examination of the issue from these diverse academic perspectives will be welcomed by those struggling with its challenges.

It's All Analytics - Part II Barrons Educational Series

Expanded and updated from the Electronic Resources section, The APA style guide to electronic resources

outlines for students and writers the key elements with numerous examples. Dissertations and theses; bibliographies; curriculum and course material; reference materials, including Wiki; gray literature, such as conference hearings, presentation slides, and policy briefs; general interest media and alternative presses such as audio podcasts; and online communities, such as Weblog posts and video Weblog posts.

Mathematical Foundations of Computer Science 1994 IGI Global

What drives innovation and entrepreneurship in India, China, and the United States? Our data-rich and evidence-based exploration of relationships among innovation, entrepreneurship, and economic growth yields theoretical models of economic growth in the context of macroeconomic factors. Because we know far too little about the key characteristics of Chinese and Indian entrepreneurs and the ways they innovate, our balanced, systematic comparison of entrepreneurship and innovation results in a new approach to looking at economic growth that can be used to model empirical data from other countries. The importance of innovation and entrepreneurship to any economy has been recognized since the pioneering work of Joseph Schumpeter. Our analysis of the major factors that affect innovation and entrepreneurship in these three parts of the world – US, China and India –provides a comprehensive view of their effects and their likely futures. Looks at elements important for innovation and

entrepreneurship and compares them against each other within the three countries Places theoretical modeling of economic growth in the context of the overall macroeconomic factors Explores questions about the relationships among innovation, entrepreneurship and economic growth in China, India and the US

Optimization for Machine Learning IGI Global

THE SERIES: FRONTIERS IN COMPUTATIONAL INTELLIGENCE The series Frontiers In Computational Intelligence is envisioned to provide comprehensive coverage and understanding of cutting edge research in computational intelligence. It intends to augment the scholarly discourse on all topics relating to the advances in artifi cial life and machine learning in the form of metaheuristics, approximate reasoning, and robotics. Latest research findings are coupled with applications to varied domains of engineering and computer sciences. This field is steadily growing especially with the advent of novel machine learning algorithms being applied to different domains of engineering and technology. The series brings together leading researchers that intend to continue to advance the field and create a broad knowledge about the most recent research. Series Editor Dr. Siddhartha Bhattacharyya, CHRIST (Deemed to be University), Bangalore, India Editorial Advisory Board Dr. Elizabeth Behrman, Wichita State University, Kansas, USA Dr. Goran Klepac Dr. Leo Mrsic, Algebra University

College, Croatia Dr. Aboul Ella Hassanien, Cairo University, Egypt Dr. Jan Platos, VSB-Technical University of Ostrava, Czech Republic Dr. Xiao-Zhi Gao, University of Eastern Finland, Finland Dr. Wellington Pinheiro dos Santos, Federal University of Pernambuco, Brazil

Class Two at the Zoo CRC Press

It's All Analytics! The Foundations of AI, Big Data and Data Science Landscape for Professionals in Healthcare, Business, and Government (978-0-367-35968-3, 325690) Professionals are challenged each day by a changing landscape of technology and terminology. In recent history, especially in the last 25 years, there has been an explosion of terms and methods that automate and improve decision-making and operations. One term, "analytics," is an overarching description of a compilation of methodologies. But AI (artificial intelligence), statistics, decision science, and optimization, which have been around for decades, have resurged. Also, things like business intelligence, online analytical processing (OLAP) and many, many more have been born or reborn. How is someone to make sense of all this methodology and terminology? This book, the first in a series of three, provides a look at the foundations of artificial intelligence and analytics and why readers need an unbiased understanding of the subject. The authors include the basics such as algorithms, mental concepts, models, and paradigms in addition to the benefits of machine learning. The book

also includes a chapter on data and the various forms of data. The authors wrap up this book with a look at the next frontiers such as applications and designing your environment for success, which segue into the topics of the next two books in the series.

Handbook of Research on Digital Libraries Cambridge University Press An intelligent agent interacting with the real world will encounter individual people, courses, test results, drugs prescriptions, chairs, boxes, etc., and needs to reason about properties of these individuals and relations among them as well as cope with uncertainty. Uncertainty has been studied in probability theory and graphical models, and relations have been studied in logic, in particular in the predicate calculus and its extensions. This book examines the foundations of combining logic and probability into what are called relational probabilistic models. It introduces representations, inference, and learning techniques for probability, logic, and their combinations. The book focuses on two representations in detail: Markov logic networks, a relational extension of undirected graphical models and weighted first-order predicate calculus formula, and Problog, a probabilistic extension of logic programs that can also be viewed as a Turing-complete relational extension of Bayesian networks.

Techniques and Applications for Advanced Information Privacy and Security: Emerging Organizational, Ethical, and Human Issues Morgan

James Publishing
The Problem? Companies are failing to deliver on AI and analytics with over half stating they are "not yet treating data as a business asset". Over half admit that they are not competing on data and analytics. Seven out of 10 companies in a 2020 MIT study reported minimal or no impact from AI so far. Among the 90% of companies that have made some investment in AI, fewer than 2 out of 5 (40%) report business gains from AI in the past three years. And only about 25% of organizations have actually forged this data-driven culture. Is investment lacking? No. Companies now are spending more than ever in data, analytics, and AI technologies. Is it a lack of technology? No. There are fascinating breakthroughs occurring on all fronts with image, voice, and streaming pattern recognition on the forefront. Is it a lack of technical talent? Not really. While some studies cite that we need to train more data scientists, developers, and related professionals, the curve of demand by supply is dampening. Is it a lack of creating an executable strategic plan? Yes. While there has been a lot of strategic wishing, organizations lack meaningful strategic plans. Specifically, the development of executable strategies and the leadership to see these strategies brought to fruition. This is the problem. Lack of execution and lack of incorporating key components that align and enable execution of the business strategy to delivery is killing AI and analytics programs. Scott Burk and Gary D. Miner have written this book for

executives at all levels who are charged with executing on analytics that need to address this issue. The book provides unique insights into repairing the gaps that programs need to fill to provide value from analytics programs. It complements their three-part series, It's All Analytics! by focusing on leadership decisions that augment data literacy, organizational architecture, and AI case studies.

"This book is an in-depth collection aimed at developers and scholars of research articles from the expanding field of digital libraries"--Provided by publisher.

Statistical Machine Learning

University of Michigan Press

This volume and volume II HECTOR - Basic Projects present the results of HECTOR, the four-year cooperation from 1984-1988 between the University of Karlsruhe and IBM Germany. The HECTOR Project has two major aspects: the first is to explore new ways in university education. The associated projects are presented in this volume. It includes a survey of the objectives of the cooperation project, its organization and the experience of the project management. Experience in student education using data processing equipment and particularly personnel computers is presented, e.g. distribution of software, introduction of standards and coordination of the activities in the different institutes. The second aspect of HECTOR, i.e. research work, results and experiences of the installation of the

prototype of a heterogeneous computer network in a university, is presented in volume II.
