Competitive examination preparation takes enormous efforts & time on the part of a student to learn, practice and master each unit of the syllabus. To check proficiency level in each unit, student must take self-assessment to identify his/her weak areas to work upon, that eventually builds confidence to win. Also performance of a student in exam improves significantly if student is familiar with the exact nature, type and difficulty level

of the questions being asked in the Exam. With this objective in mind, we are presenting before you this book containing unit tests. Some features of the books are- The complete syllabus is divided into logical units and there is a self- assessment tests for each unit. Tests are prepared by subject experts who have decade of experience to prepare students for competitive exams. Tests are as per the latest pattern of the examination. Detailed explanatory solution of each test paper is also given. Student is advised to attempt these Tests once they complete the preparation/revision of unit. They should attempt these Test in exam like environment in a specified time. Student is advised to properly analyze the solutions and think of alternative methods

and linkage to the solutions of identical problems also. We firmly believe that the book in this form will definitely help a genuine, hardworking student. We have put our best efforts to make this book error free, still there may be some errors. We would appreciate if the same is brought to our notice. We wish to utilize the opportunity to place on record our special thanks to all faculty members and editorial team for their efforts to make this book.

The two Practical Approach volumes on protein-ligand interaction do not comprise a comprehensive compilation of all the methods

that can be used to investigate protein-ligand interactions. Instead, they are a selection of the most useful and easily applied methods and will be an invaluable guide to the principal techniques used to study the interactions of proteins and ligands. This second volume covers the major spectroscopic methods: FTIR, Raman, and fluorescence spectroscopy; circular dichroism, NMR, mass spectrometry, atomic force microscopy, and the use of paramagnetic probes. There are also chapters on X-ray crystallography and molecular modelling. Hydrodynamic and calorimetric techniques are covered in volume one. Both volumes are available individually, or as a set. Both volumes are written from a practical standpoint to be applicable to both academic and industrial scientists wishing to characterize protein-ligand systems by using a multi-disciplinary approach.
