Designs on the Past HarperCollins
 Now in softcover, the second novel from one of the hottest writers in modern SF *Design of Machinery* The Whirlwind War Fix the machinery of your life . . . and serenity and wealth will follow. Starkly compelling in its simplicity, in *The Systems Mindset: Managing the Machinery of Your Life*, Sam Carpenter expands on the core inspirational element of his business bestseller, *Work the System: The Simple Mechanics of Making More and Working Less*, now in its third edition. *Mindset* is your path to quickly breaking free: to making a small tweak in how you see your world and then using that more accurate vision to get what you've always wanted from work, relationships, and health. When

the systems mindset epiphany strikes, you will instantly see the visible and invisible machinery that determines your existence. With this startling new perception, you'll see that your world is not a confusing array of sights, sounds, and events and, instead, grasp that it's a simple and logical collection of systems, systems that can be quickly adjusted to deliver the life results you've always wanted. You will never be the same.

Kidnapped and sold into slavery in the American South, freeman Solomon Northup spent twelve years in bondage before being freed. *Twelve Years a Slave* is Northup's moving memoir, revealing unimaginable details of the horrors he faced as a slave on Southern plantations, and his unshakable belief that he would return home to his family. Written in the year after Northup was freed and published in the wake of Harriet Beecher Stowe's *Uncle Tom's Cabin*, Northup's story was quickly taken up by abolitionist groups and news organizations as part of the fight against slavery, and continues to resonate more than a century after the end of the American Civil War.

Lessons from and for the creative professions of art, science, design, and engineering: how to live in and with the Plenitude, that dense, knotted ecology of human-made stuff that creates the need for more of itself. We live with a lot of stuff. The average kitchen, for example, is home to stuff galore, and every appliance, every utensil, every thing, is compound—composed of tens, hundreds, even thousands of other things. Although each piece of stuff satisfies some desire, it also creates the need for even more stuff: cereal demands a spoon; a television demands a remote. Rich Gold calls this dense, knotted ecology of human-made stuff the "Plenitude." And in this book—at once cartoon treatise, autobiographical reflection, and practical essay in moral philosophy—he tells us how to understand and live with it. Gold writes about the Plenitude from the seemingly contradictory (but in his view, complementary) perspectives of artist, scientist, designer, and engineer—all professions pursued by him, sometimes simultaneously, in the course of his career. "I have spent my life making more stuff for the Plenitude," he writes, acknowledging that the Plenitude grows not only because

it creates a desire for more of itself but also because it is extraordinary and pleasurable to create. Gold illustrates these creative expressions with witty cartoons. He describes "seven patterns of innovation"—including "The Big Kahuna," "Colonization" (which is illustrated by a drawing of "The real history of baseball," beginning with "Play for free in the backyard" and ending with "Pay to play interactive baseball at home"), and "Stuff Desires to Be Better Stuff" (and its corollary, "Technology Desires to Be Product"). Finally, he meditates on the Plenitude itself and its moral contradictions. How can we in good conscience accept the pleasures of creating stuff that only creates the need for more stuff? He quotes a friend: "We should be careful to make the world we actually want to live in."

What begins as the sheer desire for adventure turns into a spiritual quest as a young woman comes to terms with her

family, her dreams, and her first love.

Tania Aebi was an unambitious eighteen-year-old, a bicycle messenger in New York City by day, a Lower East Side barfly at night. In short, she was going nowhere—until her father offered her a challenge: Tania could choose either a college education or a twenty-six-foot sloop. The only catch was that if she chose the sailboat, she'd have to sail around the world—alone. She chose the boat, and for the next two and a half years and 27,000 miles, it was her home. With only her cat as companion, she discovered the wondrous beauties of the Great Barrier Reef and the death-dealing horrors of the Red Sea. She suffered through a terrifying collision with a tanker in the Mediterranean and a lightning storm off the coast of Gibraltar. And, ultimately, what began with the sheer desire for adventure turned into a spiritual quest as Tania came to terms with her troubled family life, fell in love for the first time, and—most of all—confronted her own needs, desires, dreams, and goals...

Civilizations come and go... ..and they don't always go quietly. In our global civilization, the consequence of it all crashing is going to be far-reaching, and with nowhere to hide. With so many moving parts and a lack of long-term stewardship by our leaders, odds are good that you will want to make at least a few preparations... but the question you often ask is: how? That's where I come in. In *Beyond Collapse*, we not only get you prepared for such an event, but we also help you and your fellow survivors come together, defend one another, preserve what may be lost and rebuild civilization together. Unlike most books of this type, we don't require a paramilitary mindset, tinfoil headgear, bunkers, or living "off-grid." Everything in here is geared towards gaining skills and resources that are just as useful and socially acceptable in peaceful times as they will be when society and civilization crashes. You will find this book useful for beginners, or those who have been preparing for a long time. The best part is, you will find it useful even if civilization holds up just fine. Peppered Minds is about the journey of a young geologist, Neeraj, beginning his professional life. His imaginative mind conjures up a thesis presented on a brainstorming session for the welfare of his countrymen and the nation. The book provides an interesting insight to explain blatant problems that contribute to the lack of innovation, misconduct and all kinds of frenzy we see around today. The writing of the book is a lighthearted account of the protagonist, Neeraj, brought up in a conservative middle-class god-fearing family, who travels from Jaipur to Hyderabad to start his professional life as a geologist. The story depicts his bitter and heartening experiences, be it meeting an astrologer, making a railway reservation, going on a rail journey from Jaipur, joining up at his new office in Hyderabad or eventually completing a successful geological expedition in the wild. Neeraj's tryst with the various characters along his brief journey brings to light the mind set, personal traits, beliefs and culture of a vast cross section of the ordinary public that span age groups ranging from the child to the octogenarian. The book depicts several interplays of events that envelope the geologists in the office as well as in the field. One of the momentous events that overwhelms Neeraj is his meeting with the Moon and learning of the unbelievable history of human existence on earth. There are also hilarious episodes, including the one which describes the use of kerosene as the basic material for nuclear research.

Did you know that asking a new kind of question can immediately change your life? One morning in 1997, college student Noah St. John was in the shower when he asked himself a question that changed his life: Why are we trying to change our lives saying statements we don't believe . . . when the human mind responds automatically to something even more powerful? That's when he invented the stunningly simple yet amazingly effective method he named Affirmations—a method that's since helped tens of thousands of people around the world to attract more money, lose hundreds of pounds, find their soul mates, grow their businesses, and dramatically improve their lives, with just four simple steps. The Book of Affirmations isn't just another book on

abundance. It's a proven, step-by-step guidebook to living the life of your dreams. Inside this book, you'll discover: • What the Belief Gap is and why it's keeping you stuck • How a struggling insurance salesman increased his income by 560 percent in less than a year—and found the love of his life—using this method • How a 13-year-old girl cured her chronic insomnia using this simple technique—in just one night • What they told you about the Law of Attraction that's just flat-out wrong • How to quit smoking and overcome depression without drugs or therapy • The 2 most effective questions of all time, and the 1 question you should never ask • How to create instant superstar performance in yourself and everyone in your organization • And that's just the beginning . . . Are you ready to join the Affirmations Revolution? Twelve Years A Slave, Illustrated Edition Wiley

In a perfect world, software engineers who produce the best code are the most successful. But in our perfectly messy world, success also depends on how you work with people to get your job done. In this highly entertaining book, Brian Fitzpatrick and Ben Collins-Sussman cover basic patterns and anti-patterns for working with other people, teams, and users while trying to develop software. This is valuable information from two respected software engineers whose popular series of talks—including "Working with Poisonous People"—has attracted hundreds of thousands of followers. Writing software is a team sport, and human factors have as much influence on the outcome as technical factors. Even if you've spent decades learning the technical side of programming, this book teaches you about the often-overlooked human component. By learning to collaborate and investing in the "soft skills" of software engineering, you can have a much greater impact for the same amount of effort. Team Geek was named as a Finalist in the 2013 Jolt Awards from Dr. Dobb's Journal. The publication's panel of judges chose five notable books, published during a 12-month period ending June 30, that every serious programmer should read.

Thinking the Impossible Harper Collins CMH Publication 70-30. Edited by Frank N. Schubert and Theresa L. Kraus. Discusses the United States Army's role in the Persian Gulf War from August 1990 to February 1991. Shows the various strands that came together to produce the army of the 1990s and how that army in turn performed under fire and in the glare of world attention. Retains a sense of immediacy in its approach. Contains maps

which were carefully researched and compiled as original documents in their own right. Includes an index.

It is often said that the practice of management is in crisis, and that managers are now finding it harder than ever to develop strategies which withstand the shocks of the marketplace. This

illuminating book cuts through these conflicting issues to show how organizational communication plays a vital role in confronting uncertainty. Arguing that many managers fail to adequately consider the communication consequences of the decision making process and its impact on organizational effectiveness, Hargie and Tourish present here numerous organizational communication insights, and show how

they reveal a way through these dilemmas. Based on cutting-edge research findings and case studies, this book features contributions from the UK, USA, Canada, New Zealand and Norway, bringing multiple perspectives to this topical subject. The result is a comprehensive guide to organizational communication useful for managers, academics and students.
