In *Short-Term Treatment and Social Work Practice: An Integrative Perspective*, Eda G. Goldstein and Maryellen Noonan take the best of theories that social workers have relied on for decades, including ego psychology, other psychodynamic and psychosocial frameworks, and the cognitive-behavioral approach, to create a new short-term practice model for social workers. *Short-Term Treatment and Social Work Practice* introduces the authors' integrative short-term treatment (ISTT), and demonstrates in detail each aspect of the approach. Their book is replete with case examples that illustrate ISTT's principles and techniques and their use in a variety of situations - including crisis intervention, family- and group-oriented therapy, treatment of clients with emotional disorders, and treatment of nonvoluntary and hard-to-reach clients.

"Science is a way of thinking about and investigating the accuracy of assumptions about the world. It is a process for solving problems in which we learn from our mistakes. Social work has a long history of social reform and helping efforts. Let us continue this by paying attention to the important message of this book. --Eileen Gambrell, PhD, School of Social Welfare University of California at Berkeley (From the Foreword) Although many psychosocial interventions used in social work practice have strong research evidence supporting their efficacy, a surprising number do not, potentially resulting in harmful outcomes. In this book, the

authors cast a critical eye on the reality of commonly used scientific and pseudoscientific practices in social work today. Stressing the need for separating research-based practices from those not supported by adequate levels of evidence, they examine the scientific and pseudoscientific bases for popular social work interventions used in a variety of treatment settings. The text examines the misuse of legitimate research and describes how social work education training can and should discourage pseudoscience. The concluding chapter describes pathways through which social work practice can become more firmly grounded in contemporary scientific research. This engaging book is intended for courses in critical thinking and evidence-based practice and is a valuable resource for all social work students and practitioners. Key Features: Promotes critical thinking regarding the evidence-based research--or lack thereof--behind a variety of social work interventions Written by renowned social work educators Addresses the history and characteristics of pseudoscience Examines pseudoscience practices in assessment and work with children, adolescents, adults, and individuals with developmental difficulties

What role do material objects play in the in-situ, embodied and spatial circumstances of interaction? How do people organize their embodied conduct with regard to such objects, and how is this consequential in and for their work practices? In this volume, contributors focus on these questions in terms of connections between ongoing courses of

interaction within work practices, object materiality and mobility in space, bodily movement and manipulation of objects, and language. The chapters in this book address a broad range of settings and actions (including dressmaking, foreign language teaching, international business meetings and forklift driving) where a variety of objects become relevant.
