A big, inside look at the shocking lack of

regulation within the pet food industry, and how readers can dramatically improve the quality of their dogs' lives through diet. What's really going into commercial dog food? The answer is horrifying. Big Kibble is big business: \$75 billion globally. A handful of multi-national corporations dominate the industry and together own as many as 80% of all brands. This comes as a surprise to most people, but what's even more shocking is how lax the regulations and guidelines are around these products. The guidelines—or lack thereof—for pet food allow producers to include ever-cheaper ingredients, and create ever-larger earnings. For example, "legal" ingredients in kibble include poultry feces, saw dust, expired food, and diseased meat, among other horrors. Many vets still don't know that kibble is not the best food for dogs because Big Kibble funds the nutrition research. So far, these corporations have been able to cut corners and still market and promote feed-grade food as if it were healthful and beneficial—until now. Just as you are what you eat, so is your dog. Once you stop feeding your dog the

junk that's in kibble or cans, you have taken the first steps to improving your dog's health, behavior and happiness. You know the unsavory side of Big Tobacco and Big Pharma. Now Shawn Buckley, Dr. Oscar Chavez, and Wendy Paris explain all you need to know about unsavory Big Kibble—and offer a brighter path forward for you and your pet.

Chicken, Shrimp, and Veggies Salmon & Cabbage And more! Recipes for cats include: Turkey Meatloaf Turkey & Salmon Hash Steak & Eggs Fish Salad Gumbo And more! Debunk the myth that pet food companies are the only entities qualified to feed your pets. Instead, beat pet obesity, disease, and sickness by reaching into your pantry or refrigerator, turning on the stove, and starting to cook yourself! Making food at home will also decrease those exorbitant pet food bills. It's time to go back to the table. Know exactly what your pet is eating and serve it a variety of real food that it deserves. Be a responsible pet parent by balancing your pet's diet and pleasing its palate. Cooking for your pet is paws-ible!

Highlighting the dangers of modern pet food--how it is unbalanced, creates addiction, and often contains ingredients that can literally poison your pet, this book destroys the myths propounded by pet food companies that human food is bad for pets, and that natural food diets are unsafe. Three veterinarians share their expertise and scientific evidence, providing an in-depth appraisal of the pet food industry and what people are feeding to their cats and dogs. This revolutionary book teaches how to read pet food labels and what ingredients to avoid, how to save on pet bills by preventing diet-related disease in pets, why veterinarians are often ignorant of the health effects of manufactured pet food, how a change in diet can cure many diet-related illnesses, and why organic farming practices and suppliers can be the best choice for pets. Armed with this information, people will be able to provide a better and healthier life for their animals.

Choosing the right dog food in a world with too many choices
Walking down the dog food aisle in a pet supply superstore can present you with an overwhelming number of choices. Reading about dog food on the internet can make your head spin with so many opinions and stories. And judging the content that you find on dog food packaging can be confusing and misleading. How can the average dog owner make an informed choice in accordance with her dog's age, size and condition? In her latest book, author Linda Case describes how to make logical, evidence-based decisions for what to feed your dog amid all the options available.

You will learn

- How pet food marketers appeal to your emotions to persuade you to buy a particular type of dog food.
- To distinguish between scientific, evidence-based information and the anecdotal evidence which is so pervasive—and often misleading—in the dog

food arena.

- Is there a scientific basis for dog foods designed specifically for puppies, senior dogs, canine athletes—even various breeds of dogs?
- How to read and evaluate all of the material included on a typical package of dog food from the ingredients and label claims ("Natural," "Anti-Oxidant," "Low Fat"), to the Nutrient Analysis and Nutritional Adequacy statements.
- How to avoid choice paralysis and the cognitive traps that can interfere with clear decision making.

What experts are saying about Dog Food Logic

Pet food is like a religion for many—but now those strong emotional ties can be backed up with fact. Linda Case separates fact from fiction, explains the complex terms and offers a guide to pet nutrition in simple to comprehend language. Unlike other books on this topic, there is no agenda here—except to present facts and then allow pet owners to make their own logical conclusions, letting the kibble drop where it may.
