Medical Group  
Management Journal  
Routledge

This handbook presents  
step-by-step protocols for  
telephone triage and  
advice for over 150  
pediatric symptoms and

chief complaints. Written  
in algorithmic format, the  
protocols list questions  
the health care  
professional should ask  
the caller to assess the  
urgency of the problem  
and determine whether it  
requires emergency  
intervention, an office  
visit, or home care. Where  
appropriate, the book  
provides first aid and  
home care instructions for

parents and alerts parents  
to complications that  
warrant a call back.  
Steps Toward a Universal  
Patient Medical Record  
Medical Group  
Management Assn  
Performing telephone  
triage requires the ability  
to make quick and  
effective decisions based  
on limited  
information. This rapid-  
access resource delivers

over 200 triage protocols for evaluating patients' symptoms over the telephone. Each symptom entry lists questions, grouped by urgency level, to determine whether the caller should seek emergency care immediately, seek medical care the same day, call back for appointment, or follow home care instructions. Detailed home care instructions are then provided. Simple, direct, and useful, it is the most comprehensive and user-friendly telephone triage

book available. This new edition features several new protocols--Swine Flu (H1N1 virus), Bedbug Problems, Tattoo Problems, and Emergency Contraception--as well as new information in the introductory chapter about program development, management issues, and staff development, including training. Also featured is a new reminder about documentation in each protocol as well as a new anatomic Table of Contents and expanded

home care instructions.

Specialized care for cancer-related emergencies and acute conditions has evolved

into a new discipline - a hybrid of oncology and emergency medicine. However, most cancer patients are not treated for their emergencies at specialized centers; rather, they go to acute care facilities in general hospitals or emergency rooms. The purpose of Oncologic Emergencies is to provide an additional resource for primary care providers (internists, family practitioners, advanced clinical practitioners), emergency physicians, oncologists, and other healthcare

providers who may not see oncology patients on a regular basis. Written by acute care oncology experts, *Oncologic Emergencies* is an informative and authoritative review for when cancer patients require acute symptom management. The text is extensively indexed for easy access and retrieval of information. Chapters discuss triage, life and death situations, major presenting symptoms, diagnostic imaging, and pathophysiology of emergency illness.

Additional chapters focus on the organ system (including pain emergencies and psychiatric emergencies) with other chapters dedicated to pediatric and geriatric cancer patients. *Oncologic Emergencies* is a compact, concise and comprehensive guide to the management of acute and emergency situations relating to cancer. Key Features: Features generic names for medications and foreign synonyms to allow for world-wide use. Incorporates algorithms,

especially for diagnostic approaches or therapeutic management. Includes a dual-platform mini-CD-ROM with the complete text and illustrations, in fully searchable PDF files. *Fragmented: A Doctor's Quest to Piece Together American Health Care* Jones & Bartlett Learning. This handy guide provides all the commonly used, but rarely memorized information you need in both the front and back office—from normal lab values and common medical abbreviations to dosage calculations,

triage questions, and more.

The Complete Guide to Nutrition in Primary Care Edited by Darwin Deen, MD, MS Lisa Hark, PhD, RD Clinicians and patients agree that primary care office visits should include routine nutrition assessment and counseling. But how do you fit it into an already crowded consultation? And what is the most up-to-date advice? With The Complete Guide to Nutrition in Primary Care,

Drs. Deen and Hark provide the necessary tools. This comprehensive overview of nutrition answers your questions on:

- Nutrition as Preventive Medicine
- Nutrition through the Lifecycle
- Improving Health by Changing Diet and Lifestyle Behaviors
- Vitamins, Minerals, Dietary Supplements, and the Alternative
- Successful Changes to the Environment

This timely paperback contains everything the primary care clinician needs to counsel patients on diet

and lifestyle issues. Keep it close at hand for the frequent consultation it is sure to receive. Dr. Darwin Deen is one of the nation's foremost authorities on nutrition. Currently Professor of Clinical, Family and Social Medicine and Director of Medical Student Education at the Albert Einstein College of Medicine in New York, he has trained a generation of physicians on the connection between nutrition and health. He has played a leading role in revising medical school

curricula to incorporate nutrition training. An award-winning teacher and noted author, he serves as Chair of the Task Force on Medical Nutrition Education of the American College of Nutrition and co-chairs the Group on Nutrition of the Society of Teachers of Family Medicine. His years of experience as a family physician make him perfectly suited to advise clinicians on counseling their patients on diet and lifestyle. Dr. Lisa Hark is a renowned family nutrition expert, with more than 20

years of experience in nutrition counseling and promoting the benefits of healthy eating in children and adults. As Director of the Nutrition Education Program at the University of Pennsylvania School of Medicine in Philadelphia, she developed a model medical school curriculum and textbook, *Medical Nutrition and Disease*, which has become one of the most widely used texts in nutrition education. She was given the Excellence in Medical/Dental Nutrition Education award from the

American Society for Nutrition. Dr. Hark was also the host of the TV show, "Honey, We're Killing the Kids," which airs on TLC, and is a widely sought after speaker who communicates nutrition concepts effectively to health professionals, patients, and the media. Rightsizing is the process of determining whether a medical practice has the right number of staff doing the right things at the right time, with the right resources to achieve optimal practice performance. With declining reimbursement and increasing costs,

medical practice executives frequently look to staffing as a means of reducing costs. Before taking action, however, they need to know that a higher level of staffing may increase practice revenue. Authors Deborah Walker and David Gans provide the systematic approach to rightsizing staff in the medical practice. They outline a five-step process to benchmark and analyze current staffing, productivity and work processes to realign staffing levels and

responsibilities. This book includes a number of tools and resources to help practice executives apply the staff rightsizing process to their organizations. By following the authors' guidelines, practice leaders will realize that rightsizing doesn't always mean downsizing or reducing costs. It means having the right number and right mix of staff to ensure optimal physician productivity and practice efficiency to maximize the practice's financial performance. Book jacket.

Every nation in the world has recognized

the necessity to deliver personal and primary care to its people. This includes first-contact care, care based in a positive and caring personal relationship, care by a single healthcare provider for the majority of the patient's problems, coordination of all care by the patient's personal provider, advocacy for the patient by the provider, the provision of preventive care and psychosocial care, as well as care for episodes of acute and chronic illness. These facets of care work

most effectively when they are embedded in a coherent integrated approach. The support for primary care derives from several significant trends. First, technologically based care costs have rocketed beyond reason or availability, occurring in the face of exploding populations and diminishing real resources in many parts of the world, even in the wealthier nations. Simultaneously, the primary care disciplines-general internal medicine and pediatrics and family medicine-have matured

significantly.
